June Birthstone– Pearl

Pearls are finely polished beauties. Traditionally white or ivory, they also can be found in pinks, purples, blacks, and golds. The pearl is very different from other birthstones because it is not really a stone at all. Pearls are created by mollusks like clams or oysters. When a grain of sand finds its way inside the mollusk's shell, the mollusk seals off the irritant by coating it with nacre, or mother-of-pearl. After many coatings, it becomes rounded, and a pearl is born.

Love Those Long Summer Days

June 20 marks this year's summer solstice.

This is the first day of summer in the northern hemisphere and the day with the most daylight hours. This is because the sun is traveling along its northernmost path. Conversely, in the southern half of the world, this date marks the shortest day and the beginning of winter. Many cultures and communities have special traditions to honor the solstice.
