## Acknowledgements

This report details the sixteenth in an annual series of citizen satisfaction surveys conducted for Prince William County, through its Office of Executive Management, under contract with the Center for Survey Research of the University of Virginia. All those connected with this project are grateful to the hundreds of Prince William County residents who have given of their time to answer many detailed questions in order to help their government better to serve them.

Dr. Thomas M. Guterbock, Director of the Center and Professor of Sociology, has been the Principal Investigator from the commencement of these studies, and has been involved in all phases of the project, including budgeting, questionnaire drafting, logistical planning, data coding, data analysis, and writing this report.

Mr. Lawrence R. Keller, Senior Auditor in the Prince William County Office of Executive Management/Internal Audit, served as project manager and as primary point of contact between CSR and the County on all aspects of the project. He participated actively in the design of the questionnaire and in editing previous survey reports. He has been meticulous in his oversight of the project and has been a big part of our efforts to deliver a quality product over the past several years.
At CSR, Dr. Abdoulaye Diop, Senior Research Analyst, Dr. Trung Kien Le, and Deborah A. Kermer, M.A., Research Analysts, conducted the project analysis and co-authored the final report along with Dr. Guterbock. Dr. Diop prepared the analysis plan and served as Project Coordinator.

Mr. John Lee Holmes, Survey Operations Manager and Dr. Trung Kien Le, Research Analyst, were responsible for the writing and debugging of the computer-assisted telephone script. Mr. Holmes was also responsible for supervising the data collection. Dr. Guterbock and Mr. John Lee Holmes were responsible for writing the methods report.
Mr. Young-Il Kim, M.A., Research Analyst, assisted with the preparation of the data files. Ms. Kathy Coker, Mr. Andrew Farber-Miller, and Mr. Daniel Thomas Moore, Project Assistants, provided assistance with the coding of the openended comments and formatting of the Appendices.
Dr. Alisú Schoua-Glusberg, General Partner in the firm Research Support Services, provided for the translation of the questionnaire into Spanish. Mr. Leonard Arnold supervised the Spanish language interviewing during data collection.

For Prince William County, Mr. Craig Gerhart, County Executive, gave his support and advice to this project from the outset. Staff members from many County offices contributed to the review of items for this year's questionnaire.

The Center for Survey Research is responsible for any errors or omissions in this report. Questions may be directed to the Center for Survey Research, P.O. Box 400767, Charlottesville Virginia 22904-4767. CSR also may be reached by telephone at 434-243-5222; by electronic mail at surveys@virginia.edu, or via the World Wide Web at: http://www.virginia.edu/surveys.

## Executive Summary

The 2008 Prince William County Citizen Satisfaction Survey is the sixteenth in an annual series conducted by the Center for Survey Research (CSR) at the University of Virginia, at the request of the Prince William County government.

A new feature of this year's survey is the inclusion of cell-phone respondents. This is the first year Prince William County has had the opportunity to contact people who do not have landline phone service, as previous years' surveys relied primarily on Random Digit Dialing (RDD) samples. This new sampling design, which consisted of augmenting the RDD sample with directory-listed and cell-phone samples, improved the representativeness of the 2008 survey.

Another feature of this year's survey is the addition of new questions related to the County's immigration policy adopted by the County Board of Supervisors (BOCS) in July 2007 and implemented by the Police Department in Spring 2008; and new questions about crime victimization and reporting. This year's survey shows significant changes in items related to the police, with satisfaction increasing in some areas (combating gangs and illegal drugs) and decreasing in others (police attitudes). Although 80.5 percent of residents were satisfied with police efforts to enforce the new policy with respect to illegal immigrants, satisfaction with the overall performance of the Police Department decreased significantly from 92.3 percent in 2007 to 89 percent in 2008. This year, overall satisfaction with the Police appears to be related to the race or ethnicity of the respondent. For example, in 2005 when overall satisfaction was 94 percent, blacks were 91 percent satisfied and Hispanics the most satisfied at 97 percent with all others at 94 percent. This year, the rating for all others is virtually unchanged, but satisfaction among blacks had dipped to 85 percent and Hispanic satisfaction with police has decreased to 73 percent.

Satisfaction with the Police Department attitudes and behaviors towards citizens also decreased significantly from 87.9 percent in 2007 to 79.3 percent in 2008. The changes of perceptions in police performance may reflect, to some extent, the conflicting opinions in the community about the policy itself, which were evident in the open-
ended comments from respondents about its enforcement.

This year's telephone survey of 1,666 randomly selected individuals living in the County was conducted from April 29 to July 25, 2008. As in prior years, the goals of the survey were:

- To assess citizen satisfaction with services offered in the County;
- To compare satisfaction levels with those reported in previous surveys;
- To analyze which subgroups among the County's residents may be more or less satisfied than others with the services they receive;
- To continue annual measurement of overall perception of quality of life in Prince William County; and
- To examine the demographic characteristics of workers who commute out of Prince William County for their primary jobs.
This is the eighth Prince William County survey to use the alternating-questions survey format. This format, implemented in January 2001 by the County government and CSR staff to control survey length, contains core questions to be asked each year and two alternating sets of questions. The form is: Core plus group A in one year, followed by Core plus group B in the next year. The 2008 survey includes the core questions, plus the questions designated group B. Some geographic regions were over-sampled (see Appendix B) to include a larger number of respondents in order to allow for a comparison among all geographic areas. Geographic and telephone service weighting was used to generalize results to the entire County without over-representing any particular district or underrepresenting cell-phone only respondents.

All the statistical tests performed this year were completed using SPSS Complex Samples, an addon module for SPSS for Windows®, which is used by CSR for data analysis purposes. This module provides more statistical precision with respect to inferences for a population by incorporating the complex sample design into survey analysis

## Changes from 2007

Overall satisfaction with County services was 89.4 percent, a rating that is nearly the same as that of last year (89.5\%).

About six out of ten respondents (58.6\%) said that they felt that the County could be trusted most of the time or just about always. These opinions show a significant decrease from the 64.1 percent reported in 2007.

Compared to 2007, fourteen of the core items showed significant increases in satisfaction, while seven items showed significant decreases in satisfaction. Compared to 2006, one of the rotating items showed an increase in satisfaction while one showed a decrease in satisfaction.

## Increases in satisfaction:

## Core Satisfaction Items:

- Satisfaction with the Prince William County's growth rate increased from 44 percent in 2007 to 56.1 percent in 2008.
- Satisfaction with the job the County is doing in planning how land will be used and developed in the County increased from 47.5 percent in 2007 to 56.4 percent in 2008.
- Satisfaction with opportunities for citizens input on the planning process in the County increased from 66.6 percent in 2007 to 74.9 percent in 2008.
- Satisfaction with the visual appearance of new development in the County increased from 78.5 percent in 2007 to 84.5 percent in 2008.
- Satisfaction with the way residential and business development is coordinated with the transportation and road systems increased from 35.5 percent in 2007 to 48.6 percent in 2008.
- Satisfaction with the job the County is doing in providing street lighting where it's needed in the County increased from 73.8 percent in 2007 to 84.7 percent in 2008.
- Satisfaction with the job the County is doing in providing convenient ways for people to register to vote increased from 94.9 percent in 2007 to 97 percent in 2008.
- Satisfaction with the Police Department's effort to reduce the use of illegal drugs increased from 83.2 percent in 2007 to 87.7 percent in 2008.
- Overall satisfaction with Community Services Board (CSB) services increased from 73.9 percent in 2007 to 86.9 percent in 2008.
- Overall satisfaction with Community Services Board (CSB) services to people with mental retardation increased from 73.3 percent in 2007 to 85.6 percent in 2008.
- Overall satisfaction with Community Services Board (CSB) services to people with substance abuse problems increased 63.7 percent in 2007 to 80.4 percent in 2008.
- Satisfaction with the ease of travel or getting around within Prince William County increased from 46.9 percent in 2007 to 54.6 percent in 2008.
- Satisfaction with the ease of travel or getting around Northern Virginia outside Prince William County increased from 27.7 percent in 2007 to 37.2 percent in 2008.
- Satisfaction with the County's landfill services increased from 96 percent in 2007 to 98.3 percent in 2008.

## Decreases in satisfaction:

## Core Satisfaction Items:

- General satisfaction with the job the County is doing in giving residents value for their tax dollar decreased from 80.2 percent in 2007 to 74.8 percent in 2008.
- Satisfaction with the overall performance of the Police Department decreased from 92.3 percent in 2007 to 89 percent in 2008.
- Satisfaction with the Police Department attitudes and behaviors towards citizens decreased from 87.9 percent in 2007 to 79.3 percent in 2008.
- Satisfaction with the job the County is doing in providing emergency medical rescue services decreased from 98.5 percent in 2007 to 95.8 percent in 2008.
- Satisfaction with safety from crime during daylight hours decreased from 94.3 percent in 2007 to 91.9 percent in 2008.
- Satisfaction with the job the County is doing in providing programs to help the County's elderly population decreased from 83.2 percent in 2007 to 77.2 percent in 2008.
- Satisfaction with the County Website decreased from 93.9 percent in 2007 to 90 percent in 2008.

This year represents an upturn in satisfaction with items pertaining to development, growth, and transportation issues. Satisfaction for these items has trended downward in the past few years. For example, satisfaction with the County growth rate, which was rated at 44 percent in 2007, had decreased from 48.7 percent in 2004 to 44.5 percent in 2006. This year, satisfaction with the County growth's rate was rated at 56.1 percent, a
significant increase in satisfaction. Satisfaction with ease of travel or getting around Prince William County and satisfaction with ease of getting around Northern Virginia outside of Prince William County increased significantly from their 2005 ratings ( $38.1 \%$ and $24.5 \%$, respectively) to 54.6 percent and 37.2 percent, respectively in 2008.

## Changes from 2006 on Non-Core Survey Items

Several items were returned to the survey this year according to the rotating schedule of non-core items. Of these items, one showed significant increase in satisfaction while another one showed a significant decrease in satisfaction:

## Increases in satisfaction:

- Satisfaction with the police department's efforts to combat gang activity increased from 76.1 percent in 2006 to 84.7 percent in 2008.

Decreases in satisfaction:

- Satisfaction with the job the County is doing in providing help to people in financial need decreased from 76.7 percent in 2006 to 69.1 percent in 2008.

## Long-Term Trends

The overall long-term picture remains positive: a combination of steady rates of satisfaction in some indicators and sustained improvement in others over the annual surveys. Prince William County residents are on the whole very satisfied with their County government and quality of life. On most satisfaction items included in the 2007 survey, where significant changes in citizen satisfaction have occurred since the baseline survey taken in 1993, changes have been in the direction of greater satisfaction or continued high levels of satisfaction with minor fluctuations from year to year.

The indicators showing a general trend of improvement since 1993 are as follows:

- Satisfaction with the County's value for tax dollars is up more than 9 points since 1993.
- Satisfaction with helping the elderly is up approximately 9 points since 1993.
- Satisfaction with information on government services is up over 10 percentage points since 1993.
- Satisfaction with the landfill is up almost 7
percentage points since 1993.
- Satisfaction with providing help to those in financial need is up over 8 percentage points since 1993.
- Satisfaction with the police department's efforts to reduce the use of illegal drugs is up over 8 points since 1993.
- Satisfaction with voter registration is up over 5 points from 1993.
- Satisfaction with street lighting is up over 13 percentage points since 1993.

Of the 2008 satisfaction items, twenty-two were asked of respondents in 1993. None of this year's ratings had decreased significantly from their 1993 ratings.

## Overall Quality of Life

With regard to overall quality of life, Prince William County remains a place that people believe is a good place to live. On a scale of 1 to 10, with 10 being the highest quality, the mean rating has increased from 6.90 in 1993 to 7.18 in 2007, a statistically significant improvement. In 2008, the quality of life is rated at 6.98 , a mean rating which is not statistically significant from last year's mean of 7.18. It is worth noting that if this year's survey had relied solely on sampling landline households, as in prior years, this year's mean rating for the quality of life would have been virtually unchanged: 7.12

## New Questions in 2008

Four additional open-ended questions were added to this year's survey: two questions related to the types of crime respondents were victim of and the reasons for not reporting the crimes to the Police Department; and two questions related to the reasons for satisfaction and dissatisfaction with the job the Police Department is doing in carrying out the immigration policy. In addition to these openended questions, the 2008 survey included seven completely new items:

- In the past year, have you gone to a voting precinct in Prince William County to vote in any election? ( $62.7 \%$ said yes)
- How satisfied are you with the efficiency and effectiveness of the voting precinct set-up for handling voters on election days? (92.8\% satisfied)
- How satisfied are you with job the Police Department is doing in carrying out this policy [Immigration Policy]? (80.5\% satisfied)
- How satisfied are you that the Police Department treats everyone fairly regardless of race, gender, ethnic or national origin? (74.3\% satisfied)
- How satisfied are you with the safety of buildings, residential and non-residential, constructed in the County in the last two years? (89.2\% satisfied)
- Thinking back over the past twelve months, were you or anyone in your household the victim of a crime? ( $12.5 \%$ said yes)
- Did you report it to the Prince William County Police Department ( $78.7 \%$ of those who said they were victim of crime responded yes).

## Conclusion

The respondents rated 61 specific services and a general rating of satisfaction with government services and quality of life in Prince William County, for a total of 62 satisfaction items. The highest rated satisfaction items in our survey
related to security in the Courthouse, the libraries, the compost facility, medical rescue, fire protection, the landfill, overall performance of the Sheriff's Office, and opportunities for voter registration. Forty-two of the 61 ranked satisfaction items scored ratings of 80 percent or better. Five items received ratings less than 60 percent: satisfaction with ease of travel around Northern Virginia outside of Prince William County, coordination of development with road systems, growth in the County, ease of travel around Prince William County, planning and land use.

The survey results suggest that most residents of Prince William County are satisfied with the services they receive. The reductions in satisfaction levels on some items also indicate areas where improvements might be made. A more detailed discussion of the findings can be found in the body of the report. This detailed information is offered to assist County decision-makers and the public as they continue to seek ways to further improve the quality of services that Prince William County offers to its residents.

Figure I-1: Prince William County Citizen Satisfaction Survey Geographic Regions, 2008

## I. Introduction and Summary of Methods

## Overview

The 2008 Prince William County Citizen Satisfaction Survey is the sixteenth in an annual series conducted by the Center for Survey Research (CSR) at the University of Virginia, at the request of the Prince William County government. This year's telephone survey of 1,666 randomly selected individuals living in the County was conducted in the spring and summer of 2008.
As in prior years, we have utilized an alternatingquestions format for the survey. About half the questions are designated as "Core" questions, those that are included on the survey each year. The remaining questions are divided into two groups which are included in the survey in alternate years. This year, four rotating questions were moved into the list of core questions: the capacity to shelter in place with power (SHELTER1), the capacity to shelter without power (SHELTER2), satisfaction with the level of security in the courthouse (COURTSAT), and satisfaction with the way that residential and business development is coordinated with transportation and road systems (ROADDEVA). Please refer to Appendix F for a list of which items were included this year.

A new feature of this year's survey is the inclusion of cell-phone respondents. This is the first year Prince William County has had the opportunity to contact people who do not have landline phone service, as previous years' surveys relied primarily on Random Digit Dialing (RDD) samples. The decline in respondents from the youngest age group between 1993 and 2007 prompted the County and CSR to conduct a Cell-Phone Pilot project in 2007. Results from the pilot project showed that more minorities, low-income groups, renters, never-married residents, and respondents with low levels of education were likely to be reached via cell-phone samples than via traditional RDD samples, which contact only households that have landline phone service. Based on the results from the Cell-Phone Pilot survey, CSR recommended to the County that RDD samples be augmented with cell-phone samples for a better representation of the County's population.

Another feature of this year's survey is the addition of new questions related to the police immigration policy enacted since last year's survey. On July 10, 2007, the Board of County Supervisors passed a resolution directing County Police to undertake a greater role in immigration enforcement. The original resolution required police to do an immigration check on anyone detained or stopped, if there was probable cause to believe the person was in violation of federal immigration law. This resolution was modified on April 29, 2008 to require inquiries into the immigration status only of persons who are under physical custodial arrest for a violation of state or local law.

This "immigration policy" resolution is the subject of a two-year comprehensive study by a team of experts directed and coordinated by the University of Virginia Center for Survey Research. Because CSR conducts an annual citizen satisfaction survey for the County, it was determined that this year's survey should include questions about residents’ satisfaction with the job the Police Department is doing in carrying out this policy, their reasons for being satisfied or dissatisfied with the policy, and their satisfaction that the Police Department treats everyone fairly regardless of race, gender, ethnic, or national origin.

Because of concerns (in light of this new immigration policy) regarding past use of the word "citizen" in three survey questions, most participants in this year's survey were asked, instead, about "residents". To allow this change in wording while maintaining continuity in the ratings across years, questions using that term were asked in a split ballot format. Only twothirds of surveys used the word "residents" and the remaining one-third of surveys used the word "citizens." In addition to these changes, this year's survey asked residents whether they were victim of any crimes. They were also asked to identify the types of crimes they were victim of and whether they reported the crime to the police.

This year's survey also marks the second time the defined geographic regions were reduced from eight to seven. The new geographic regions, which were defined in 2007, include (1) Battlefield; (2) Broad Run; (3) Hoadly; (4) Old Bridge; (5) Dale; (6) Potomac; (7) Forest Park (Figure I-1).

Overall, the purposes of this year's survey are similar to those in most previous years:

- To assess citizen satisfaction with services offered in the County;
- To compare satisfaction levels with those reported in previous surveys;
- To analyze which subgroups among the County's residents may be more or less satisfied than others with the services they receive;
- To continue annual measurement of overall perception of quality of life in Prince William County;
- To examine the demographic and employment characteristics of workers who commute out of Prince William County for their primary jobs.
- To gather data useful for the evaluation of the new policy on illegal immigrants.

The complete 2008 interview script is found in Appendix A of this report. Appendix B details survey methodology, Appendix $C$ provides information on the demographic characteristics of the sample, and Appendix D includes the frequency distributions for all substantive questions. Appendix $E$ presents the crosstabulations/satisfaction mean ratings by the demographic variables. Appendix F consists of a table that identifies the core questions and alternating-year questions, as well as new questions and questions eliminated from the survey. At the end of the report is an index for the satisfaction variables appearing in the report.

The survey results reported here cover general perceptions of the Prince William County government, overall quality of life, and satisfaction with specific programs, processes, and services. The report begins with a presentation of the quality of life (see Section II). Satisfaction with County services is examined in detail in Section III. Section IV explores communication with the County, and Section $V$ considers development, growth, transportation and County appearance. General attitudes toward government and taxes are covered in Section VI. Section VII presents employment and commuting issues. Finally, Section VIII summarizes the findings of the survey on the whole, particularly with regard to trends in satisfaction levels.

Each section provides a descriptive summary and interpretation of the 2008 results. All satisfaction
levels and certain other results are compared with results in prior years, with significant changes noted. We report the results from the first survey year, 1993, and the most recent five years, 2004 to 2008 but results for questions from prior surveys are not reported if they were not asked this year. Important significant differences among subgroups in the population are reported. The margin of error for the 2008 survey is $\pm 2.4$ percentage points.

## Subgroup Analysis

As in previous years, the responses were broken out and analyzed by several demographic categories. In discussing the results, we report those instances in which relevant statistically significant differences were found among demographic subgroups, such as, for example, between women and men, or between residents of different parts of the County. (Statistically significant differences are those that probably did not result merely from sampling variability, but instead reflect real differences within the County's adult population. ${ }^{1}$ ) The demographic variables listed below were those principally used in our subgroup analysis. In some cases, categories were combined to facilitate comparison.

- Age. Age was divided into five categories for most analyses: 18-25, 26-37, 38-49, 50-64, and over 64.
- Education level. Comparisons were made between persons with some high school, high school graduates, some college, four-year degrees, some graduate work, including professional and doctorate degrees.
- Marital status. Respondents presently married were compared with those in other categories (separated, divorced, widowed, and never married).
- Work status. Persons in the labor force working full-time, working part-time, or looking for work were compared with those not in the labor force: retirees, homemakers, and students.
- Household income. Four categories of selfreported annual household incomes were compared: Less than \$35,000; \$35,000 -

[^0]\$49,999; \$50,000 - \$74,999; and more than \$75,000.

- Homeowner status. We also compared homeowners with renters on satisfaction items.
- Race/ethnicity. Whites, Blacks, Asians, and "others" were compared. Hispanic respondents were also compared with non-Hispanic respondents. Two separate questions in the interview ask about race and ethnicity. Respondents are first asked if they consider themselves to be "of Hispanic origin." They are then asked to say what category of race "best describes you," using a list that does not include Hispanic as a race. This follows the definition in the U.S. Census, which considers Hispanic to be an ethnic category and makes clear that Hispanics can be of any race. However, many Hispanic respondents take a different view and when asked to state their "race" insist that they are Hispanic (or Latino). These respondents are classified in our survey as "other race" on the race question. As a result, the great majority of those labeled "other race" in the report are actually self-identified Hispanics.

In the graphs in this report that display race and ethnicity jointly, the "Hispanic" bar is based on the separate question about Hispanic origin, and this is displayed alongside the several categories from the race questions, thus including again many of the same Hispanic respondents categorized as "other" on race. But others who declared Hispanic origin are included with Whites, Blacks or Asians based on their responses to the "race" question.

In some of the graphs in this report, respondents are divided into three mutually exclusive groups: Hispanics, non-Hispanic Blacks, and all others. It is important to note that non-Hispanic Blacks are a subset of all Blacks.

- Gender. Women were compared with men.
- Geographic area. The study areas, shown in Figure 1-1, include the seven geographic areas newly defined for the 2007 survey, each of which is a group of contiguous Zip code areas: (1) Battlefield; (2) Broad Run; (3) Hoadly; (4) Old Bridge; (5) Dale; (6) Potomac; (7) Forest Park. Our subgroup analysis of geography includes these areas. Residents of the cities of

Manassas and Manassas Park and Quantico Military Base were excluded from the study.

## Interpreting Subgroup Differences

Every effort has been made to avoid speculative interpretations about why, for example, men as a group should differ significantly from women, or residents of one geographic area from residents in another, or persons with college degrees from those without college degrees, in their satisfaction levels with respect to given items. A variety of circumstances can cause two groups to differ in the levels of satisfaction they express with a given service, program, or process. People are "satisfied" when the level of service they receive (or perceive to be available to them) meets their expectations. Therefore, satisfaction depends both on what people receive and their expectations of what they think they ought to receive. When Group A expresses a higher level of satisfaction than Group B, it can mean one or more of the following:

Actual differences in service levels. People in Group A may actually be receiving a different level of service than those in Group B. This can happen because the service is site-specific, and the people in Group A are located closer to the service site(s) than are those in Group B. The given service also may be targeted specifically toward members of Group A for reasons of age, income, eligibility, need, etc. Older residents may be more satisfied than younger people with services to senior citizens, for instance, because they are the targeted recipients of those services. In several cases we are able to control for these factors by asking screening questions about the eligibility or familiarity of the respondent. In other instances, of course, it is impractical to determine eligibility or proximity to a service through the use of survey questions directed at County residents as a whole.

Differences in expectations. People in Group B may report lower satisfaction because they expect more service than do those in Group A. Expectations about service differ for many reasons. Often, people form expectations about what government services should be from past experience. Group B, then, may include people who experienced a higher level of service in some other community, leading to dissatisfaction with the service level available where they live now. Conversely, members of group A may be highly satisfied now because they used to live somewhere
with poorer provision of the service in question. When service levels in a community increase over time, satisfaction of long-term residents may be higher than the satisfaction of newcomers because their expectations are based on the lower service levels to which they had become accustomed in the past.

Differences in perceptions of costs versus benefits. Group B also may be less satisfied than Group A because they perceive the costs of the service differently, or think that government is doing "too much" as a general matter. For example, higher income residents may feel that welfare programs impose a tax burden upon them while not bringing them direct benefit. Political viewpoints differ among citizens to begin with: some expect their government to provide many services, while others desire lower service levels. These differences can be especially important in people's judgments about human services provided by government. Thus, some residents may base their satisfaction level on an informal cost-benefit analysis involving both perceptions of service quality and considerations of service cost efficiency. In this year's survey, with its questions about the police illegal immigration enforcement policy, opinions about the policy itself can have a direct effect on how people judge the police in carrying out that policy.

We hope, nonetheless, that the subgroup analyses provided will give both County decision-makers and the public a better sense of how different residents perceive County services, and will suggest possible avenues to improvement in service levels.

## Visibility

At various places in this report, we refer to the "visibility" of various services. The visibility score refers to the percentage of County residents who are sufficiently familiar with a service to be able to rate it. For example, if 10 percent of those asked about a service say they don't know how to rate it or don't have an opinion about its rating, then that service has a visibility of 90 percent. For some services, we specifically asked respondents a screening question to determine if they were familiar enough with a particular service to give it a rating. The visibility of all service items is summarized and compared in Section VIII of this report.

## Summary of Methods

This survey was conducted by telephone in order to ensure the broadest possible representation of results. For most households, CSR employed a random-digit dialing method that ensures that all households in the County with landline telephones were equally likely to be selected for interviews; for most others we utilized the electronic white pages. According to respondents, about 21.5 percent of calls were to unlisted numbers; the majority of these ( $91.5 \%$ ) had chosen an unlisted number, as opposed to other unlisted households whose number had simply not yet appeared in the latest phone book. Finally, a third sample segment was contacted via cell-phone.

We conducted all interviews from CSR's Computer-Aided Telephone Interviewing (CATI) laboratory in Charlottesville, Virginia. Production interviews were conducted from April 29 to July 25,2008 . The interviewing staff was composed of carefully trained personnel, most of whom had prior experience as CSR interviewers, and a number of whom had prior experience with the previous Prince William County survey specifically. A total of 80,328 dialing attempts were made in the course of the survey, involving a sample of 16,895 different attempted phone numbers. All numbers were attempted at least once, but not all were working numbers and not all working numbers were those of residences located within the study area. At least eight attempts were made before a working number was inactivated, and a portion of the initial refusals were contacted again after no less than three days. CSR completed a total of 1,666 interviews, for a final response rate estimated at 21.4 percent of the number of qualified households in the original sample. The interview took an average of 19.4 minutes to complete. ${ }^{2}$
Based on 1,666 respondents, the survey has a sampling error of plus or minus 2.9 percentage points. This estimate of the margin of error takes into account the "design effect" associated with post-stratification weighting of the data (See Appendix B). This means that in 95 out of 100
${ }^{2}$ These indicate the "completion time"-the time that it took the interviewer to complete the interview after selection of a qualified respondent. The total time a household respondent was on the phone for this year was an average of 21.5 minutes.
samples of this size drawn from Prince William County, the percentage results obtained for each question in each sample would fall in a range of $\pm$ 2.9 percent of what would have been obtained if every household in the County with a working telephone (landline and cell-phone) had been interviewed. Larger sampling errors are present when analyzing subgroups of the sample and for questions asked of fewer respondents.

When comparing the results of the 2008 survey with those of previous years, independent T-tests were used to assess statistical significance between the years. The sample size of each survey is large enough that a change of approximately 5 percent, up or down, will be statistically significant if a service was rated by most of the respondents questioned each year. However, for services that were less "visible" and rated by smaller numbers of respondents, a change of only 5 percent in satisfaction may not be statistically significant. The same T-tests were used to assess the difference between the 2008 ratings and the demographic variables. Further details on the sample and methodology may be found in Appendix B of this report.

All the T-tests performed this year were completed using SPSS Complex Samples, an add-on module for SPSS for Windows ${ }^{\circledR}$, which is used by CSR for data analysis purposes. This module provides more statistical precision with respect to inferences for a population by incorporating the sample design into survey analysis. It also allows the possibility to take into account the design
effect, a by product of post stratification weighting, when conducting the statistical tests. Consequently, some differences in means ratings could be found statistically insignificant that would not be so identified without the module.

Throughout the report, percentages may not total exactly to $100 \%$ due to rounding.

## Demographic Profile

Each year respondents are asked some questions about themselves and their households to allow for analysis of the data by personal and social characteristics.

As indicated earlier, based on the results from the Cell-Phone pilot project, this year's survey included cell-phone respondents. Overall, 11.2 percent of the completed surveys consisted of cellphone respondents and 88.8 percent consisted of land-line respondents. After weighting, 29.4 percent of the respondents this year were reached via cell-phone, and 16 percent are adults who have cell-phone service only. In general, this strategy of augmenting the traditional RDD samples with cellphone samples improved the overall distribution of the completed surveys across several demographic variables in the County. As illustrated in Figure I-2, the downward trend in the percentage of the County's residents aged thirty-four or younger who completed the survey during the period 19932007 is reversed this year with 27.4 percent of the same age group completing the survey.

Figure I-2: Residents Aged 34 Years or Younger, 1993-2008

With respect to marital status also, the percentage of "never-married" respondents who completed the survey increased significantly this year as
compared to all the percentages reported since 1993, the year CSR started conducting the PWC Citizen Satisfaction survey (see Figure I-3).

Figure I-3: PWC Citizen Satisfaction Survey, Percent of "Never Married" by Year (1993-2008)

As in previous years, women slightly outnumbered men in the sample this year, accounting for 54.6 percent of respondents. With regards to age, the demographic profile this year is different from prior years as 12 percent of the sample was between 18 and 25 years of age (compared to $4.1 \%$ in 2007), 21.6 percent were between 26 and 37 (compared to $14.9 \%$ in 2007), 27.1 percent were between 38 and 49 (compared to $31.6 \%$ in 2007), 25.9 percent were between 50 and 64 (compared to $32.9 \%$ in 2007), and 13.4 percent were 65 and older (compared to $16.5 \%$ in 2007). See Figure I-4.

Figure I-4: Age of Respondents, 2008

Six out of ten respondents were married (61.0\%), 12.3 percent were divorced or separated, 6 percent were widowed, and 20.6 percent (compared to $10.9 \%$ in 2007) were never married. Almost half
( $46.6 \%$ ) of respondents had children under the age of 18 living in their home. Of those, 37.4 percent had children under the age of five, 59.7 percent had children between the ages of five and twelve, and 61.3 percent had teens from age thirteen to seventeen.

Respondents were asked (in separate questions) what race they considered themselves to be, and whether they considered themselves to be Hispanic. Slightly more than two-thirds of the sample (67.8\%) identified themselves as white, 16.6 percent black, 4 percent Asian, and 11.6 percent said they were something else (i.e., Native American, Pacific Islander, etc.) or gave their race as "Hispanic" or "Latino," response which were also recorded as "other." Not included in this breakdown are the 5.6 percent of our sample who refused to answer the question about race. Thirteen percent (13.8\%) of the sample considered themselves to be Hispanic. Of this group, slightly more than half (59.6\%) completed the survey in English and the remaining 40.4 percent completed it in Spanish. See Figure I-5.

Figure I-5: Race of Respondents, $2008{ }^{3}$

Sixty two (62.3\%) percent of respondents were working full-time and an additional 9.3 percent were working part-time. Those not employed comprised 5.4 percent homemakers, 15.1 percent retirees, 3.1 percent students, and 3.1 percent who were looking for work.

Again this year, the sample proved to be fairly wealthy and well-educated (see Figure I-6). The median annual household income for our sample was between $\$ 75,000$ and $\$ 100,000$. Over ten percent ( $13.1 \%$ ) of the sample reported household incomes under $\$ 35,000$, 13.5 percent fell into the $\$ 35,000$ to $\$ 49,999$ range, 15.7 percent fell into the $\$ 50,000$ to $\$ 74,999$ range, and 57.7 percent reported incomes over $\$ 75,000$.

Figure I-6: Household Income, 2008

With respect to education, respondents were asked

[^1]to report their highest level of academic achievement. As is illustrated in Figure I-7, 6.7 percent had some high school and 19.6 percent were high school graduates. Slightly more than one-quarter ( $28.2 \%$ ) had attended some college, whereas 25.3 percent had a 4 -year degree. Seventeen percent (17.7\%) had done some graduate work and 2.4 percent had a Ph.D. or some other advanced degree.
Figure I-7: Educational Level, 2008

Most of the respondents live in a home that they own (71.1\%), whereas 25.9 percent rent and 3 percent have some other arrangement, such as living with their parents. Most respondents live in single-family homes (62.5\%), 23 percent live in duplexes or townhouses, and 13.4 percent live in apartments or condominiums. About 1 percent of respondents live in some other type of structure, such as a mobile home or trailer.

Five percent of the respondents have lived in Prince William County less than one year, 29.2 percent have lived in the County 1 to 5 years, 38.1 percent have lived in the County 6 to 19 years, and 23.8 percent reported living in the County twenty years or more. The rest, 3.9 percent, said they had lived in Prince William County all of their lives.
In terms of geographic distribution across parts of the County (defined by groups of Zip codes), the population of Hoadly was oversampled to ensure enough participants for statistically reliable comparisons. As a result, 13.6 percent of the sample lived in Hoadly. Oversamples were also included for the Forest Park and Potomac areas. About twelve (11.9\%) percent lived in Forest Park, 16.2 percent in the Battlefield area, and 13.9 percent in the Broad Run area. The Old Bridge area accounted for 14.1 percent, Dale accounted
for 17.2 percent, and the Potomac area accounted for 13.1 percent.

The numbers for each region were weighted in the analysis to match the actual population of residents in those areas. The weighting of the data also took into account our estimates of the
percentages of the County's adult telephone population that are served by cell-phone only, landline only, and by both types of phones. For more about the weighting procedure, see the Methodology Report in Appendix B.

## II. Quality of Life in Prince William County

## Overall Impression of PWC

As in previous years, respondents were asked about their overall impressions of the quality of life in Prince William County:
"Please imagine a scale from 1 to 10, where 1 represents the worst possible community in which to live, and 10 represents the best possible community. Where on that scale would you rate Prince William County as a place to live?"
This year's mean rating of 6.98 , which is not significantly different than last year's mean of 7.18, is an indication of the continuing high regard the County's residents have for the quality of life in Prince William County. Figure II-1 illustrates the distribution of ratings provided by respondents. The ratings were divided into three categories: "Best" includes ratings from 10 through 8, "Middle" is 7 and 6 , and "Worst" is 5 through 1. Less than one-half (44.1\%) felt the best about the quality of life in Prince William County, whereas 38.4 percent were in the middle, and 17.6 percent felt the worst.

Figure II-1: Overall Quality of Life Ratings, 2008

Figure II-2 tracks the average rating over the last 16 years. It is worth noting that if this year's survey had relied solely on sampling landline households, as in prior years, this year's mean rating for the quality of life would have been virtually unchanged: 7.12.

Figure II-2: Mean Overall Quality of Life Ratings, 1993-2008

## Demographic Factors Affecting County Ratings

The demographic analysis indicates that the quality of life ratings varied significantly by race, age, marital status, work status, education, and the length of residence in the County (see Appendix E for a complete listing of the quality of life ratings by the demographic variables). For example, widowed residents rate the quality of life significantly higher (7.61) than married (7.06), divorced (6.58), and never-married residents (6.82). Hispanics rate the quality of life significantly lower (5.93) than non-Hispanics (7.20). This is a significant change from prior surveys in which Hispanics gave quality of life ratings similar to or higher than those of nonHispanics.
As in 2005 and 2006, this year's quality of life ratings, using newly defined geographic areas, also show that the quality of life ratings are significantly higher in Hoadly (7.20) than in Dale (6.99). Figure II-3 illustrates the overall quality of life ratings provided by the geographic areas.

Figure II-3: Mean Overall Quality of Life Ratings by Area, 2008

## Quality of Life over Time

Residents who lived in Prince William County for over five years were asked to rate, on a scale of 110 , where the county stood five years ago. On this scale, 1 represents the worst possible community to live in and 10 the best. The comparative mean rating for quality of life five years ago is 7.35, which is not significantly different from the ratings of 7.41 and 7.20 reported in 2006 and 2004 respectively - the last two years this question was asked. Figure II-4 presents the results for this item with the same classification system as in Figure II-1, where "Best" was defined as those ratings from \#10-8, "Middle" was \#7-6, and "Worst" was \#5-1.

Figure II-4: Overall Quality of Life Five Years Ago, 2008

In addition, residents were asked, on a scale of 1-10, where they think Prince William County will stand five years from now. As in the previous two items, 1 represents the worst
possible community to live in and 10 the best. The rating for this item is 6.90 , which means that residents feel that the quality of life will be about the same in the future. This rating is significantly higher than the 2006 mean score of 6.63 , the last time this question was asked. Figure II-5 presents the results for this item with the same classification system as in Figure II-4, where "Best" was defined as those ratings from \#10-8, "Middle" was \#7-6, and "Worst" was \#51.

Figure II-5: Overall Quality of Life Five Years from Now, 2008

Finally, residents were asked if they would like to be living in Prince William County five years from now or if they hope to be living someplace else. More than half of the respondents (59.4\%) indicated they would like to stay in PWC, whereas about $40.6 \%$ said they would like to live someplace else. These percentages are significantly higher from the 2006 results, the last time this question was asked, when 55.7 percent said they would like to stay in Prince William.

## Summary

The 6.98 satisfaction mean rating for quality of life in Prince William County is lower but not significantly different from the 7.18 rating reported in 2007. This is an indication of the continuing high regard the County residents have for the quality of life in Prince William County. This year, Whites, Blacks, and Asians gave significantly higher ratings than residents of other races. Note that the question about race does not include Hispanic (an ethnic status) in the offered list of racial groups. Many respondents insist that their race is Hispanic, and these cases are then classified as "others" on race. Hispanics constitute the majority of the "other race" category in this survey. And, this year, for the first time, Hispanic residents gave significantly lower ratings to the quality of life than non-Hispanics. Also, unlike last year, education was positively related to the
quality of life ratings, such that County residents with higher levels of school education were more likely to give the County a higher rating than high school graduates and those with less than high school education.

## III. Satisfaction with County Services

## County Government Services

One of the main objectives of this survey is the determination of how satisfied the citizens of Prince William County are with the services they receive from their local government. Respondents were asked whether they were very satisfied, somewhat satisfied, somewhat dissatisfied, or very dissatisfied with an array of government services. For purposes of analysis, responses were typically dichotomized into two categories: satisfied or dissatisfied. In these analyses, the percent of respondents satisfied with each service is reported. Respondents who were not familiar enough with a service to respond were not counted in either of the two categories. These respondents are considered when determining the "visibility" of a service (see Section VIII.)
This chapter reports the general level of satisfaction with County government services, public services, social services, and specific services relating to public safety.
The first question, perhaps the most important question in the survey, inquires:

## "How satisfied are you in general with the

 services the County provides?"Figure III-1 illustrates the response to this question, and Table III-1 illustrates the mean level of satisfaction on this question in 1993 and over the past 5 years. This year 89.4 percent were satisfied. Of the rest, 7.5 percent were somewhat dissatisfied, and 3.1 percent were very dissatisfied (see Figure III-1). The percent satisfied did not
change significantly from the 2007 percentage of 89.5\%.

Figure III-1: Overall Satisfaction with County Government Services, 2008

Figure III-2: Overall Satisfaction with County Government Services, 1993 and 2004-2008

Table III-1: Trends in General Satisfaction with Government Services, 1993 and 2004-2008

| Item <br> Number | Satisfaction Item | 1993 | 2004 | 2005 | 2006 |  | 2007 | 2008 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| CTYSAT97 | Services of the County Government in General | 90.5 | $90.2^{2,4,5,7,9}$ | $92.1{ }^{6,10}$ | $90.8^{5,7}$ |  | $\underset{\substack{8,4,5,7,9,12}}{89.5}$ | ${ }_{\text {89, }}^{\text {, }{ }^{2,4,5,7}}$ |

| GOVTSERV | Information on Government Services | $70.9{ }^{15}$ |  | $\begin{gathered} 84.3^{0,1,2,} \\ 5,6,8,9,10 \end{gathered}$ | $\begin{gathered} 79.7_{10,12}^{0,1,2,7,} \end{gathered}$ |  | $\underset{0,1,7,12}{78.8}$ | $\begin{gathered} 81.1_{, 7}^{0,1,2,6} \\ \hline \end{gathered}$ |
| PCTUP | Efficiency/effectiveness of voting precinct | - | - | - | - |  | - | 92.8 |
| Footnotes indicate value is <br> significantly different from: ${ }^{0} 1993$ <br>  1994 |  | $\begin{aligned} & { }^{2} 1995 \\ & { }^{3} 1996 \end{aligned}$ | $\begin{array}{ll} { }^{4} 1997 & { }^{6} 1999 \\ { }^{5} 1998 & { }^{7} 2000 \end{array}$ | $\begin{array}{lll} \hline{ }^{8} 2001 & 10 \\ { }^{9} 2002 & 11 \\ \hline \end{array}$ | 10  <br> ${ }^{1} 2003$ ${ }^{12} 2005$ <br> ${ }^{1} 2004$ ${ }^{13} 2006$ |  | $\begin{aligned} & { }^{14} 2007 \\ & { }^{15} 2008 \end{aligned}$ |  |

Respondents were also asked about satisfaction in two areas of County government services, specifically: providing convenient opportunities for voters to register, and keeping citizens informed about government services. Ninety-seven (97.0\%) percent of respondents said they were satisfied with the job the County is doing in providing ways for people to register to vote. This year's rating is significantly higher than the 94.9 percent reported in 2007. Eight of ten respondents (81.1\%) ${ }^{4}$ expressed satisfaction with the job the County is doing keeping citizens informed about County government programs and services. This rating is not significantly different from the 78.8 percent reported in 2007.
Of particular interest in this year's survey was how satisfied residents were with the efficiency and effectiveness of the voting precinct set-up for handling voters on election days. Respondents were first asked whether they have gone to a voting precinct in Prince William County to vote in any election in the past year. Overall, less than two-thirds (62.7\%) of the respondents said that they have voted in the County in the past year. Of this group, the overwhelming majority (92.8\%) expressed satisfaction with the efficiency and effectiveness of the voting precinct set-up, with nearly two-thirds (63.7\%) saying they were very satisfied.

## Public Safety Services

Residents were asked to rate their satisfaction with County public safety services. This included police performance, police attitudes and behaviors toward citizens, efforts to reduce illegal use of drugs and gangs' activities, fire department performance, rescue service performance, the prevalence of cardio-pulmonary resuscitation (CPR) training among the public, and new questions this year about the police immigration ordinance and the types of crimes residents are victim of in the County.
The vast majority of residents, 89 percent, said they were satisfied with the overall performance of the police department. This rating, which is not significantly different across the regions, is significantly lower than the ratings reported in the

[^2]last five years. This year, overall satisfaction with the Police appears to be related to the race or ethnicity of the respondent. For example, in 2005 when overall satisfaction was 94 percent, Blacks were 91 percent satisfied and Hispanics the most satisfied at 97 percent with all others at 94 percent. This year, the rating for all others is virtually unchanged, but satisfaction among Blacks had dipped to 84 percent and Hispanic satisfaction with Police has decreased to 73 percent (see Figure III-3). The majority of respondents classified as "other" in this survey are Hispanics who do not identify themselves as white, black or Asian.

Figure III-3: Satisfaction with Overall Performance of the Police Department by Race/Ethnicity, 2008

Percent Satisfied
Residents were asked about their satisfaction with police attitudes and behaviors toward citizens. As indicated earlier, this question was asked in a split ballot format with one-third of the respondents answering the question with the word citizens and the remaining two-thirds answering the question with the word residents. Slightly more than threequarters (79.3\%) of respondents expressed satisfaction with the traditional question (using the word citizens), while 78.4 percent expressed satisfaction with the new wording (using the word residents) ${ }^{5}$. Using the rating of 79.3 percent for comparative purposes, the analysis shows that the 2008 satisfaction with police attitudes and behaviors towards citizens is significantly lower than those ratings experienced since 2003.
Similar to previous years, race of the respondent was related to opinions about police attitudes and

[^3]behaviors. This year, the data show that respondents of other races and Hispanics were least satisfied with the attitudes and behaviors of the police. This is a significant change from previous years. For example, in 2004, Blacks were most satisfied with the Police at 87 percent and Hispanics were most satisfied in 2005 at 91 percent. This has changed significantly in 2008 with Blacks being 73 percent satisfied and Hispanics only 54 percent. This finding is illustrated in Figure III-4.
Figure III-4: Satisfaction with Police Attitude and Behaviors by Race/Ethnicity, 2008

Figure III-5 shows overall performance ratings of the Police Department by race/ethnicity over the years. While ratings from "All Others" are consistent over the years, those of Hispanics and non-Hispanic Blacks show a sharp and significant decrease in 2008. Fluctuation in Hispanic ratings in earlier years of the survey may be due to sampling variability because of a small number of Hispanics in the samples. Recent years of the survey include more Hispanics because their increase in the County population and because, since 2006, the instrument is translated into Spanish and respondents are offered the possibility to take the survey in Spanish.

Figure III-5: Satisfaction with Overall Performance of the Police by Race/Ethnicity and by Year, 1993-2008

Satisfaction of Blacks may be different from satisfaction from non-Hispanic Blacks as the latter group is a subset of the former group.
Figure III-6 shows the satisfaction ratings with the Police attitudes and behaviors towards citizens by race/ethnicity and by year. These ratings also
indicate a sharp and significant decrease in the ratings of Hispanics. Non-Hispanic Blacks and All Others also show a decrease in their ratings.

Figure III-6: Satisfaction with Police Attitudes and Behaviors towards Citizens by Race/Ethnicity and by Year, 1993-2008

Satisfaction of Blacks may be different from satisfaction from non-Hispanic Blacks as the latter group is a subset of the former group.

With respect to age, seniors (91.8\%) were more likely to express more satisfaction than respondents aged 26-37 (71.9\%) and respondents aged 38-49 (77.8\%). Figure III-7 presents the satisfaction with police attitudes and behaviors by age.

Figure III-7: Satisfaction with Police Attitudes and Behaviors by Age, 2008

Unlike last year, the 2008 satisfaction ratings with police attitudes and behaviors show no significant differences with respected to the geographical regions. Refer to Appendix E for a complete presentation of these ratings by the demographic variables.

In regards to the immigration ordinance, respondents were asked the following question:

> The Prince William County Board of County Supervisors recently ordered the Department of Police to be more active in checking the citizenship or immigration status of people, to see if they are in violation of federal immigration law. How satisfied are you with the job the Police Department is doing in carrying out this policy? Are you very satisfied, somewhat satisfied, somewhat dissatisfied, or very dissatisfied?

Of those who were able to rate the item, eight out of ten respondents said they were satisfied with the job the Police Department is doing in carrying out the policy with nearly half (48.1\%) saying that they were very satisfied (see Figure III-8). Not accounted for in these satisfaction ratings are those respondents (7.7\%) who, because of their opposition to the policy, declined to rate it and those respondents who did not know about the policy (17.2\%).

Figure III-8: Satisfaction with the Job the Police Department is Doing in Carrying out the Immigration Policy, 2008

While there are no significant differences across the regions on this item, Dale and Potomac scored the lowest satisfaction ratings (see Figure III-9). As with satisfaction with Police Department attitudes towards citizens, satisfaction with the job the Police Department is doing in carrying out the immigration policy is significantly lower among Hispanic respondents (51\%) than among nonHispanic respondents (84.6\%) (see Table E63 of Appendix E).

Figure III-9: Satisfaction with the Job the Police Department is Doing in Carrying out the Policy by Region, 2008

Respondents who reported that they were very satisfied or very dissatisfied with the job the Police Department is doing in carrying out the policy
were asked on a follow-up question the reasons for their satisfaction or dissatisfaction. This question was asked in an open-ended format and respondents' verbatim responses were coded for analysis.
Table III-2 presents the grouped responses for those respondents who said they were very satisfied. Of these respondents, slightly more than one third (33.5\%) mentioned favorable comments on police actions and 26 percent had positive comments on the policy itself. About one-fifth (19.8\%) of those who were satisfied had negative comments on problems of illegal immigration, stressing its disadvantageous aspects. A more detailed listing of these responses is presented in Appendix D of the report.
Table III-2: Reasons for Satisfaction with the Job the Police Department is Doing in Carrying out this Policy

| Comments | Responses |  | \% of <br> cases |
| :--- | :---: | :---: | :---: |
|  | n | $\%$ |  |
| Negative comments on <br> problem of illegal <br> immigration, stressing its <br> disadvantageous aspects | 81 | 17.2 | 19.8 |
| Positive comments on <br> PWC's policy | 106 | 22.6 | 26.0 |
| Favorable outcomes or <br> effects from police <br> enforcement | 75 | 15.9 | 18.3 |
| Favorable comments on <br> police actions--general | 137 | 29.2 | 33.5 |
| Comments favorable to <br> immigrants or minimizing <br> immigration problem | 0 | 0.1 | 0.1 |
| Unfavorable comments <br> about the PWC policy- <br> general | 9 | 1.9 | 2.2 |
| Unfavorable outcomes or <br> negative effects from the <br> policy or from police <br> enforcement | 1 | 0.2 | 0.2 |
| Haven't experienced, no <br> opinion, other reasons, <br> answers cannot be coded | 61 | 13.0 | 15.0 |
| TOTAL | $\mathbf{1 0 0}$ | $\mathbf{1 1 5}$ |  |

Table III-3 presents the responses from those respondents who said they were very dissatisfied with the job the Police Department is doing in carrying out the policy. More than one-third of these respondents mentioned unfavorable comments about the Prince William County policy in general and 29.3 percent indicated unfavorable outcomes or negative effects from the policy or from police enforcement in general. As with those who were satisfied, nearly one-quarter (22.8\%) of the respondents in this group also mentioned general negative comments on problem of illegal immigration, stressing its bad aspects. Only 17.8 percent of these very dissatisfied respondents mentioned the actions of the police among their reasons. Refer to Appendix D of the report for a more detailed listing of these responses.
Table III-3: Reasons for Dissatisfaction with the Job the Police Department is Doing in Carrying out this Policy

| Comments | Responses |  | \% of <br> cases |
| :--- | :---: | :---: | :---: |
|  | n | $\%$ |  |
| Negative comments on <br> problem of illegal <br> immigration, stressing its <br> disadvantageous aspects | 20 | 19.5 | 22.8 |
| Positive comments on police <br> actions--general | 3 | 3.3 | 3.8 |

| TOTAL | $\mathbf{1 0 0}$ | $\mathbf{1 0 0}$ | $\mathbf{1 1 7}$ |

In another new survey question, respondents were asked to rate their level of satisfaction that the Police Department treats everyone fairly regardless of race, gender, ethnic or national
origin. Nearly three-quarters (74.3\%) of respondents expressed their satisfaction, with 43.8 percent saying that they were very satisfied (Figure III-10).

Figure III-10: Satisfaction that the Police Department Treats Everyone Fairly Regardless of Race, Gender, Ethnic or National Origin, 2008

As illustrated in Figure III-11, blacks (61.6\%) and respondents of other races (53.5\%) ${ }^{6}$ were less likely to be satisfied than whites (82.6\%) and Asians (79.7\%). Hispanics (49.4\%) were also less likely to be satisfied than non-Hispanics (79.8\%) (see Appendix E).
Figure III-11: Satisfaction that the Police Department Treats Everyone Fairly Regardless of Race, Gender, Ethnic or National Origin by Race/Ethnicity, 2008

Percent Satisfied

[^4]On this item again, the results show no significant differences across the regions. However, Forest Park registered the lowest score (67.2\%).
Figure III-12: Satisfaction that the Police Department Treats Everyone Fairly Regardless of Race, Gender, Ethnic or National Origin, by Region, 2008

Percent Satisfied
For the second time, this year respondents of the survey were also asked to rate their satisfaction with the performance of the Sheriff's Office overall and with respect to its attitudes and behaviors towards citizens. Overall, Prince William County residents are very satisfied with their Sheriff's Office. While 95.2 percent of residents said they were satisfied with the overall performance of the Sheriff's Office, 90.6 percent expressed satisfaction with its attitudes and behaviors toward citizens. When respondents were asked to rate their satisfaction with the Sheriff's Office attitudes and behaviors towards residents, $97.2^{7}$ percent expressed satisfaction.
When asked about the efforts law enforcement is making toward reducing the use of illegal drugs, 87.7 percent were satisfied. Responses to this item were significantly higher than those reported in 2007 (83.2\%), 2006 (82.0\%), and 2003 (82.6\%).

[^5]With respect to the police department's efforts to combat gang activity, 89.7 percent of respondents expressed satisfaction. Ratings of the police's efforts on this item were significantly higher than the 76.1 percent and 79.9 percent reported respectively in 2006 and 2004, the last times this question was asked.
As in the past, residents are very satisfied with fire and rescue services. This year, 96.6 percent were satisfied with fire fighting and 95.8 percent were satisfied with emergency rescue services. While satisfaction with fire fighting was not different from that of last year (95.8\%), satisfaction with emergency rescue services has decreased significantly from the 98.5 percent satisfaction reported last year.
For the third time this year, respondents were asked about the level of security in the Judicial Center, which is the courthouse in downtown Manassas. As in 2005 and 2007, about thirty percent (29.1\%) of the respondents had had the occasion to visit the Judicial Center during the past 12 months and the vast majority was satisfied with the level of security that they found there. More than three-quarters ( $77.1 \%$ ) were very satisfied with the level of security and an additional 21.9 percent were somewhat satisfied, for a total of 99 percent satisfaction. Although this year's rating is not significantly different from the 97.3 percent satisfaction reported in 2007, it is significantly higher than the 96.3 percent satisfaction reported in 2005.

One important safety item that has been asked in previous years is how many people in the home are trained in CPR techniques. Our survey has consistently found that about 70 percent of households in the County have someone trained in CPR, and this year is no exception. The majority of homes, 66 percent, have at least one person trained in the technique, whereas more than onequarter 27.4 percent have two or more. The percentage of homes with at least one person trained in CPR techniques is not significantly different from the 64.2 percent reported in 2007.

Figure III-13 summarizes satisfaction with all County emergency services.

Figure III-13: Satisfaction with County Emergency Services, 2008

## Calling 911

About one-fifth (19.7\%) of the respondents had dialed 911 in the past twelve months. Most had called for emergency medical services (42.3\%) or police (51.3\%). About 9.2 percent had called for fire fighters and about 5.6 percent for something else. ${ }^{8}$ Figure III-14 illustrates these results.

Those who reported calling the police during the past 12 months were further asked whether the call was because of an emergency situation or because of some other reason. About 60 percent (57.2\%) of those calling the police reported that it was an emergency, whereas the remaining 42.8 percent said that it was a non-emergency situation.

[^6]Figure III-14: Purpose of 911 Call, 2008

Asked about the last time they called 911, 94.1 percent expressed satisfaction with the help they received from the person who took their call with 78 percent saying they were very satisfied. This year's ratings are not significantly different from the 94.6 percent satisfaction reported in 2007.
All respondents who had used 911 were also asked about their satisfaction with the length of time taken for emergency services to arrive. Slightly more than two-thirds of the respondents (68.7\%) were very satisfied, and an additional 14.9 percent were somewhat satisfied, for a total of 83.6 percent satisfied. This year's satisfaction rating is not significantly different from the 89.3 percent satisfaction reported in 2007.
Dissatisfied respondents reported that on average, it took 46.7 minutes for help to come on the scene. When asked about the reasonable amount of time to receive help, these respondents reported an average of 27.2 minutes.
Most respondents were also satisfied with the help they received at the scene. Three-quarters of respondents ( $75.4 \%$ ) said they were very satisfied, whereas an additional 11.3 percent were somewhat satisfied, totaling to 86.7 percent. This year's satisfaction rating is not significantly different from the 92.6 percent satisfaction reported in 2007. Figure III-15 illustrates the overall satisfaction findings pertaining to calling 911 and Table III-4 divides these satisfaction ratings by service used.

Figure III-15: Satisfaction with 911 Services, 2008

Overall, satisfaction with public safety services varied significantly by the demographics of race, education, length of residence in the county, and work status. In general, Hispanic residents are less likely to be satisfied with the performance of the Police Department than White and Black residents. Seniors and short-term residents are also more likely to be satisfied with the County public safety services. Refer to tables in Appendix E for a complete listing of the mean ratings by the demographic variables.

Table III-4: Satisfaction with 911 by Type of Contact, 2008

|  | PERCENT SATISFIED |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Satisfaction Item | Police <br> (Emergency) | Police (Non- <br> Emergency) | Fire | Rescue Squad <br> (Ambulance) | Overall |
| Assistance from 911 Operator | 83.5 | 100 | 95.5 | 94.0 | 94.1 |
| Time for Help to Arrive | 83.5 | 100 | 89.0 | 91.9 | 83.6 |
| Assistance on Scene | 69.8 | 100 | 95.8 | 92.5 | 86.7 |

## Neighborhood Safety

Residents of Prince William County continue to feel safe in their neighborhoods. As expected, fewer (85.8\%) report feeling satisfied with the safety in their neighborhood after dark than in the daytime ( $91.9 \%$ ). While this year's satisfaction rating with safety in their neighborhood after dark is not different from the 86.7 percent reported in 2007, the satisfaction rating with safety in the daytime has decreased significantly from the 94.3 percent reported in 2007.

One important factor related to satisfaction with neighborhood safety in the evening is street lighting. Respondents were asked how satisfied they were with the job the County is doing in providing street lighting where it is needed. Eight out of ten respondents (84.7\%) were satisfied. This represents a significant increase from the 73.8 percent who were satisfied in 2007.
As in 2006, residents were asked how safe they felt in commercial and business areas of the County during daylight hours and night time. The vast majority, 90.6 percent, felt safe during the day, and 79.4 percent felt safe at night. Responses
to these items were not significantly different from those obtained in 2006 (respectively $91.9 \%$ and 79.3\%).

As with the satisfaction ratings with the public safety services discussed above, these safety ratings also varied significantly with the demographic variables including, race, and age. In general, Black residents are more likely to be satisfied with these items than White residents. Refer to tables in Appendix E for a complete presentation of these ratings by the demographic variables.

Figure III-16 illustrates all neighborhood safety items.

Figure III-16: Satisfaction with Safety from Crime, 2008

## Crime Prevention and Reporting

Overall, Prince William County residents remained satisfied with the crime prevention programs offered by the police department, with 81.6 percent expressing satisfaction. These ratings are not significantly different from those reported in 2006 (82.1\%) or in 2004 (82.8\%).

In addition, respondents this year were asked whether they, or anyone in their household, were victim of any crime during the past twelve months. As illustrated in Figure III-17, the majority of respondents said they were not victim of any crime in the past twelve months. Eleven percent (11.7\%) of the respondents said they were victim of some type of crime and 0.7 percent said they were victim of some type of crime, but not in Prince William County.

Of those respondents who were victim of crime in the past twelve months, more than three-quarters (78.7\%) said they reported the crime to the Police Department. However, slightly more than one-fifth (21.3\%) said they did not report the crime to the Police Department.

With respect to race, Blacks (14.3\%) and Whites (11.4\%) were more likely to say they were victim of crime than Asians (5.2\%). This percentage is also significantly higher with Hispanics (16.4\%) than with non-Hispanics (11.9\%).

Figure III-17: Victim of Any Crime, 2008

## Capacity to Shelter in Place

In light of concerns regarding terrorism, natural disaster, and citizen safety, respondents were asked, for the third time, two questions regarding their capacity to shelter at home if an emergency situation arose. As in 2007 the question was split with one half of respondents asked how long they could shelter "with electricity" and the other half how long they could shelter "without" electricity. These questions are now part of the survey "core" that is to be asked every year.

Imagining the presence of electricity, 18.9 percent of the respondents said they would be able to shelter for 3 days or less, 44.7 percent for 4 days to 1 week, and 36.3 percent for 8 days or more. Imagining the absence of electricity, 33.6 percent would be able to shelter for 3 days or less, 42.3 percent for 4 days to 1 week, and 24 percent for 8 days or more. As expected, the presence of electricity greatly extends residents’ capacity to shelter in the case of a natural or man-made disaster. The percentage of residents predicting they would be able to shelter for 8 days or more dropped significantly from 36.3 percent with electricity to 24 percent when electricity was not available (see Figure III-18).
While there were no significant differences in residents' capacity to shelter without power between this year and last year, responses with regard to their capacity to shelter with electricity were significantly different from those reported in 2007. In 2007, 43.2 percent of respondents said they were able to shelter for a period of 8 days or more compared to 36.3 percent this year.

Trends for all public safety items from 1993 and the last five years are shown in Table III-5.

Figure III-18: Capacity to Shelter in Place with/without Electricity, 2008

Table III-5: Trends in Satisfaction with Public Safety Services, 1993 and 2004-2008

| Item Number | Satisfaction Item | 1993 | 2004 | 2005 | 2006 | 2007 | 2008 |

## Public Services

In addition to services relating to crime, safety and emergency services, Prince William residents were asked to rate their satisfaction with a number of other public services the County provides. Respondents were asked about education, libraries, parks, and County water/sewer services. Figure III-19 illustrates the satisfaction levels with these services.

Figure III-19: Satisfaction with Public Services, 2008

To ascertain satisfaction with libraries, respondents were first asked if at least one member of their household had visited or used the County Libraries within the past twelve months. Slightly less than three-quarters (73.2\%) said at least one member of their household had (compared to $69.8 \%$ in 2007). Of those who had visited the library, 98.1 percent were satisfied with the quality of service they received from the library staff, with 84.7 percent very satisfied. These ratings are not significantly different from the 98.9 percent satisfaction reported in 2007. Overall, 95.6 percent of the respondents said they were also satisfied with the library services. This satisfaction rating is not different from the 94.4 percent reported in 2007. As in 2007, the libraries received some of the highest satisfaction ratings among the items asked in the entire survey.

As in 2007, the great majority of parents (82.7\%) reported that they had at least one child attending Prince William County public schools. Eighty-four percent ( $82.2 \%$ ) of all residents were satisfied that the school system provided efficient and effective service, with 40.6 percent very satisfied. This is not significantly different from the 84.4 percent reported in 2007.
When asked about the County's park and recreation facilities and programs, more than half (57.1\%) of respondents said they had used the County parks or recreation facilities and 89.9 percent of them were satisfied. This year's ratings are not significantly different from those reported last year when 57.0 percent reported using the County parks or recreation facilities with 89.6 percent satisfaction rating.
When asked if they were familiar enough to rate the County Park Authority, about half (45.4\%) said that they were. Of those, 93.4 percent were satisfied that the County Park Authority provides efficient and effective service, with 56.6 percent being very satisfied. Ratings on this item also are not significantly different from those reported in 2007 when 48.7 percent of the respondents said they were able to rate the County Park Authority with a total satisfaction rating of 93.7 percent.

More than one-half (59.1\%) of the respondents said they were familiar with the Prince William Service Authority. Of this group, 94.3 percent expressed satisfaction, a rating that is not significantly different from the 93.3 percent reported in 2007.

Overall, satisfaction ratings with the library services and staff and satisfaction ratings with the parks varied significantly with education, age, and work status. For example, students and residents aged 18-25 are more likely to express higher satisfaction levels with these services (see Appendix E).

## Human and Mental Health Services

Respondents were asked a series of questions regarding health and human services, such as their satisfaction with the health department, programs for the elderly, social services, and services for the mentally ill. First, however, they were asked if they were familiar enough with each of these services to be able to rate them, as many respondents do not have experience with them.

Regarding the Health Department, slightly more one-quarter ( $26.2 \%$ ) of the respondents said they were familiar enough to rate it. Their response was positive, though, with 78.9 percent expressing satisfaction, not significantly different from last year (83.9\%).
Satisfaction with programs and services available to the elderly reached 77.2 percent. This is significantly lower than the 83.2 percent who were satisfied with these services a year ago.
When asked specifically about the County's Department of Social Services, slightly more than one-fifth (22.1\%) were able to rate it, with 68.0 percent of those who could expressing satisfaction. This is not significantly different from the 73.8 percent satisfaction reported last year.
Another question that was not asked since 2006 was about satisfaction with the job the County is doing in providing help to people in financial need. One-fifth (20.6\%) of residents were very satisfied and slightly less than one-half (48.4\%) were somewhat satisfied for a total of 69.1 percent satisfied, a significant decrease from the 2006 level of 76.7 percent.
Satisfaction for human service items is shown in Figure III-20.
Figure III-20: Satisfaction with Human Services, 2008

Percent Satisfied
Respondents were asked if they were familiar with the Community Services Board (CSB), which provides mental health, mental retardation, and substance abuse services to the local community. This year saw significant increases in several items related to mental health services. About one in seven (14.6\%) of respondents were familiar
enough with these services to rate them, an increase from the 11.4 percent that was reported last year. In 2006, about the same percentage (14.6\%) of respondents said they were familiar with the services of the Community Services Board.

Of the relatively small number of residents who were familiar enough with the CSB, nearly threequarters ( $86.9 \%$ ) were satisfied with the CSB overall, a significant increase from the 73.9 percent satisfaction reported in 2007.
This year marked the fourth time respondents were asked separate questions about specific mental health services offered by the Community Services Board (CSB) as opposed to a single overall question. As in 2007, respondents were asked about their specific satisfaction with early intervention services, and services to people with mental retardation and those with substance abuse problems.

Figure III-21 illustrates the satisfaction with the CSB among residents who were familiar with it. The majority of residents (85.6\%) were satisfied with services to people with mental retardation, 81.8 percent were satisfied with the early intervention services, and 80.4 percent were satisfied with services to people with substance abuse problems. Satisfaction with the areas of services to those with mental retardation and to people with substance abuse problems increased significantly from those reported last year (73.3\% and $63.7 \%$, respectively).

Figure III-21: Satisfaction with Community Services Board Services, 2008

## Trends in Public and Human Services

Trends for all public and human service items from 1993 and the last five years are shown in Table III-6.

Table III-6: Trends in Satisfaction with Public and Human Services, 1993 and 2004-2008

| Item Number | Satisfaction Item | 1993 | 2004 | 2005 | 2006 | 2007 | 2008 |

# IV. Communication with the County 

## Information about the County and the Government

One important responsibility of the County is to keep citizens informed about the happenings of its government. Citizens pay taxes and voice their opinions through the ballot and other forums. Likewise, they must be able to inform themselves about the work of government in carrying out its duties.

## Contact with the County for Any Purpose

Although the citizens of Prince William County receive a great deal of service from the County government, they also have responsibilities as residents. They pay taxes and purchase licenses for various projects. As consumers of services or providers of revenue, thus, citizens communicate with the County government in a number of ways. In the survey, respondents were again asked a series of questions about citizens' experiences as they contacted the County.
First, in order to evaluate the amount of contact residents have with the County government, they were asked the following question:
"Thinking back over the past twelve months, have you had any occasion to contact the County about anything-a problem, a question, a complaint, or just needing some information or assistance?"
Less than half ( $40.1 \%$ ) of the residents said they had contacted the County government. This percentage is not significantly different from the 43.1 percent reported in 2007, but it is significantly lower than the response of 47.8 percent reported in 2006.
Of those who did contact the County, a total of 79.9 percent were satisfied with the helpfulness of County employees ( $57.7 \%$ were very satisfied). Satisfaction with helpfulness is illustrated in Figure IV-1 and does not represent a significant change from the 79.8 percent satisfaction level reported in 2007.

Figure IV-1: Satisfaction with County
Employee Helpfulness, 2008

## County Web Site

As in the previous years' surveys, residents were also asked about their use of the Prince William County government website. Fifty-nine percent (59.2\%) of respondents reported that they had used the website, compared with 62.4 percent in 2007 and 60.4 percent in 2006. There was initially a rapid upward trend in website usage from the 22.8 percent reported initially in 1999, but the rate of increase has leveled off in recent years. Figure IV-2 illustrates the increasing use of the County government website since 1999, and its apparent leveling off.

Figure IV-2: Use of County Website, 1999-2008

As is illustrated in Figure IV-3, of those who had used the website, 90.0 percent said they were satisfied with it ( $51.3 \%$ were very satisfied), a significantly lower satisfaction rating than the 93.9 percent reported in 2007.

Figure IV-3: Satisfaction with County Website, 2008

## Contact with County for Tax Purposes

As in 2007, respondents were asked specifically if they "had any occasion to contact the County about taxes for real estate, personal property, or a business license." Slightly more than one-third (36.2\%) had contacted the County for this purpose. This percentage is not significantly different from the 35.9 percent reported in 2007.
As is illustrated in Figure IV-4, nearly threequarters ( $77.2 \%$ ) contacted the government by phone, 32.4 percent made contact in person, and 11.8 percent contacted the County by mail. ${ }^{9}$

Figure IV-4: Methods of Contact Regarding Taxes, 2008

Of those who had contacted the County about a tax issue, 85.8 percent expressed satisfaction with the level of assistance they received from the County employees, with 63.3 percent very satisfied. Most also reported that they were
satisfied with the time it took for their request to be answered, with 88.4 percent satisfied, and 63.6 percent very satisfied. These overall levels of satisfaction are higher but not significantly different than those received in 2007 (85.2\% and $83.2 \%$, respectively).
Figure IV-5 illustrates the satisfaction levels for the communication items in 2008. The trends for the related satisfaction items over past surveys are shown in Table IV-1.

Figure IV-5: Satisfaction with Contacting the County, 2008

## Percent Satisfied

Use of and satisfaction with the government website varied significantly with several demographic variables including marital status, education, homeownership, and length of residence in the County (see Tables in Appendix E for a complete listing).

[^8]Table IV-1: Trends in Communication Items, 1993 and 2004-2008

## V. Development Issues

In each year of the survey, a series of questions is included to gauge citizen opinion about land use, development, new jobs, ease of travel, waste management, and related development issues in Prince William County. Growth and development mean new opportunities for employment but can also bring new demands on infrastructure, such as roads and community facilities. Many of the items reported in this chapter continue to show far lower levels of satisfaction than is the case with most other Prince William County services. On the other hand, some of these items show increased satisfaction in 2008.

## Land Use and Development

As in previous years, we asked:

> "In general, how satisfied are you with the job the County is doing in planning how land will be used and developed in the County?"

As illustrated in Figure V-1 below, 17.8 percent said they were very satisfied with land use planning, and an additional 38.6 percent said they were somewhat satisfied, totaling $56.4^{10}$ percent of residents who were satisfied. The remaining 43.6 percent of residents were dissatisfied (19.0\% very dissatisfied, and $24.6 \%$ somewhat dissatisfied). This level of satisfaction is significantly higher than any satisfaction level reported on this item since 2004. In 2007, 47.5 percent reported satisfaction on this item.

As expected, newer residents and renters were more satisfied than homeowners and those who have lived in the County for longer. Those living in PWC for more than 20 years were the least satisfied with the County's planning and land use (see Appendix E).

[^9]Figure V-1: Satisfaction with Planning and Development, 2008

## Rate of Growth

A related question is whether the residents of Prince William County are satisfied with the rate of growth the County is experiencing. More than half of the residents surveyed were satisfied (56.1\%), with 40.8 percent somewhat satisfied and 15.3 percent very satisfied. On the other hand, about one-fifth of respondents (19.8\%) said they were very dissatisfied and one-quarter (24.1\%) were somewhat dissatisfied with PWC's rate of growth. Significantly more residents were satisfied with the rate of growth this year than in every year since 2003. Thus, this year marks a reversal in the downward trend seen in recent years. In 2007, only 44 percent of respondents were satisfied with the rate of growth.

Figure V-2: Satisfaction with the Rate of Prince William Growth, 2008

As expected, newer residents, those with children, renters, and the youngest residents were the most satisfied with the rate of growth. Retirees and those living in PWC for ten years or more were significantly less satisfied with the rate of growth than others (see Appendix E).

Compared to 2007, residents in all areas were significantly more satisfied with the rate of growth in Prince William County, as illustrated in Figure V-3. Again, there were no significant differences in satisfaction between areas.

Figure V-3: Satisfaction with County Growth by Area, 2008

## Percent Satisfied

2007 ■2008

## Citizen Input

Respondents were quite satisfied with the opportunities for citizen input into the planning process this year, with 74.9 percent saying that they were satisfied ( $22.2 \%$ very satisfied and $52.7 \%$ somewhat satisfied). This level is significantly higher than it has been since 2004. For instance, in 2007, 66.6 percent of the respondents reported satisfaction and in 2006, 68.5 percent were satisfied.
As with PWC's rate of growth, satisfaction ratings with the opportunities for citizen input do not differ by geographic area. As illustrated in Figure V-4, the increase in satisfaction with opportunities for citizen input is apparent in all regions.
Some groups of residents were somewhat more satisfied with opportunities for citizen input than others. In particular, renters and the oldest and youngest residents were the most satisfied with their opportunities (see Appendix E).

Figure V-4: Satisfaction with Opportunities for Citizen Input by Geographic Area, 2008

Figure V-5 illustrates satisfaction levels for each of the land use and development items.
Figure V-5: Satisfaction with Development Items, 2008

## Appearance

Two questions were posed to residents about the appearance of the County. Residents were first asked how satisfied they were with the visual appearance of new development in the County. Secondly, residents were asked to rate their satisfaction with the County in preventing
neighborhoods from deteriorating and making sure the neighborhood is well kept. In addition, respondents were asked about the safety of buildings, residential and non-residential, constructed in the County in the last two years.

The visual appearance of new development was satisfactory for 84.5 percent of residents, with 31.8 percent saying they were very satisfied. Residents were somewhat less satisfied with the job the County is doing in preventing neighborhoods from deteriorating and making sure the community is well kept (68.6\%), with 45.9 percent being somewhat satisfied and 22.7 percent very satisfied. Satisfaction with prevention of neighborhood deterioration did not significantly increase this year (compared to $66.9 \%$ in 2007), but satisfaction with the visual appearance did increase significantly, rising six percent from the 78.5 percent satisfaction level reported in 2007.

The satisfaction with these areas was compared across various demographic characteristics and is reported in Appendix E. Residents in the lowest income category ( $<\$ 35 \mathrm{k}$ per year) were significantly more satisfied with efforts to prevent neighborhood deterioration, as were residents who indicated they were black or Hispanic. Black residents also reported significantly more satisfaction with the visual appearance of new development, as did residents with children.

For the first time, respondents were asked about the safety of buildings, residential and nonresidential, constructed in the County in the last two years. Overall, 89.2 percent expressed satisfaction with 40.7 percent saying they were very satisfied and 48.4 saying they were somewhat satisfied.

Figure V-6 illustrates mean satisfaction levels for appearance and building items.

Figure V-6: Satisfaction with Appearance Items and Safety of Buildings, 2008

## New Jobs

All respondents were asked a screener question to determine if they were familiar enough with the County's efforts to attract new jobs and businesses to be able to rate those efforts. Over one-quarter (28.8\%) of the respondents said that they were familiar with those efforts, no different than in 2007, when 29.4 percent were familiar. Only those respondents familiar with the efforts of the County to attract new jobs and businesses were asked to rate how well the County was doing.

A total of 77.8 percent said they were satisfied, with 28.9 percent reporting that they were very satisfied. This level of satisfaction does not differ from the 79 percent who were satisfied last year. ${ }^{11}$

## Waste Management

Regarding the landfill, approximately half (45.2\%) of the responding PWC residents had taken trash to the County's landfill at Independent Hill. In 2007, 47.5 percent said they had taken trash to County's landfill. The vast majority, 98.3 percent, were satisfied with the landfill ( $86.5 \%$ very satisfied). This year's satisfaction is significantly higher than the 96 percent satisfied reported in 2007.

There was also a significant increase in use of composting, with more respondents (16.1\%)

[^10]saying they had used the compost facility in PWC this year than the last time this question was asked, in 2006 (9.9\%). Of those respondents, nearly all, or 97.2 percent, said they were satisfied, not significantly different from the 2006 level of 99 percent satisfaction.
Figure V-7: Satisfaction with Waste Management Services, 2008

## Transportation

Getting around is not always easy in the Northern Virginia area. Each year, respondents are asked how satisfied they are with the ease of travel or getting around within Prince William County. This year 54.6 percent were satisfied, significantly more than each year since 2004. For instance, in 2005, 38.1 percent were satisfied and in 2007, 46.9 percent were satisfied.

Figure V-8 illustrates the pattern of satisfaction with transportation within the County over the past nine years, illustrating residents' increasing dissatisfaction from 2004 to 2006 and the recent improvements.
Overall, slightly less than one-half (48.6\%) of the respondents said they were satisfied with the way residential and business is coordinated with the transportation and road systems. This year's rating is significantly higher than the 35.5 percent reported in 2007 and the 34.9 percent reported in 2005. This question, which was part of the rotating questions, is included in the set of core questions starting this year.

Figure V-8: Satisfaction with Ease of Travel in the County, 1999-2008

All regions achieved a significant increase in residents' satisfaction with travel in the County as illustrated in Figure V-9. The least satisfied were those in the Potomac (45\%) and Battlefield (49.2\%) areas. Respondents from Old Bridge (62.2\%), Dale (60\%), and Hoadly (59.7\%) were the most satisfied with travel in the County.
Figure V-9: Satisfaction with Ease of Travel in the County by Geographic Area, 2007-2008

It must be noted that the transportation problem is not one unique to Prince William County. Respondents were also asked how satisfied they were with the ease of travel in Northern Virginia outside of Prince William County, and that produced the lowest satisfaction ratings among all items in the entire survey. Only 37.2 percent of respondents were satisfied with the ease of travel in Northern Virginia, with only 8.7 percent being very satisfied. Although this year's satisfaction is lower than all the items rated on the survey, it is significantly higher than the 27.7 percent of residents satisfied in 2007 and the 24.5 percent satisfaction from 2005.
Some groups of respondents were even less satisfied with the ease of travel outside the county than others (see Appendix E). Those who reported having attended college and those with higher incomes were particularly dissatisfied. (As will be seen in Section VII, these groups are more likely to be commuters.) Residents aged 38-64 were less satisfied than others, as were residents without children.

## Quality of Streams

This year, residents were asked to rate their level of satisfaction with the County efforts to preserve and improve the water quality of the streams.

Only the residents who indicated they were familiar with these efforts (30.4\%) were asked that question.
Of the residents familiar with the County's efforts regarding the water quality of streams, 85.4 percent were satisfied. This rating is not significantly different from the 82.7 percent satisfaction rating reported in 2006, when 32.1 percent of the respondents were familiar with the efforts.

Figure V-10: Satisfaction with the County's Efforts to Preserve and Improve the Water Quality of the Streams, 2008

Table V-1: Trends in Developmental Issues, 1993 and 2004-2008

## VI. Views of Government

Section III reported residents' satisfaction with government services individually and overall. This section will address the more general views of local government expressed by the citizens of Prince William County, such as the attitudes toward the County government and opinions about value for tax dollars.

## Efficient and Effective Service

This year, the citizens of Prince William again reported the extent to which they believe the government provides efficient and effective service. The majority of residents were satisfied with this issue, with 85.8 percent being somewhat or very satisfied (see Figure VI-1). This year's satisfaction is not significantly different from the 85.6 percent satisfaction observed last year.

Figure VI-1: Satisfaction with Efficiency \& Effectiveness of County Service, 2008

## Trust in Government

Respondents were also asked how often they trust the County government to do what is right. As illustrated in Figure VI-2, the majority (58.6\%), reported trusting the County most of the time or just about always. Slightly more than one-third (39.5\%) said that the County government could be trusted only some of the time, whereas only 1.9 percent said that they could never or almost never trust the government.
The oldest residents, those over the age of 64, reported trusting the government significantly more than residents of any other age group, with
75.8 percent reporting they trust the government to do what is right most of the time or just about always. However, residents who are Black, rent, or have incomes less than $\$ 35 \mathrm{k}$ a year reported the least trust in government-less than half reported trusting the government to make the right decisions most or all the time (see Appendix E).
Figure VI-2: Trust County Government Decisions, 2008

Figure VI-3 illustrates the trends of residents' trust over the last five years of the citizen survey, showing the total percent of respondents who said they would trust the County government most of the time or just about always. This year, there was a significant drop in trust from previous years (2004, 2005, and 2007).

Figure VI-3: Trust County Government Decisions, 2003-2008

Percent saying "Always" or "Most of the time"

## View of Taxes

As a general rule, local governments encounter the difficult tradeoff of operating within resource constraints while trying to satisfy the increasing demands and expectations of the community. Citizens, unlike elected leaders and other policy makers, are not faced every day with the need to choose the right mix of taxes and services. One question we posed to our respondents asked them to consider just this tradeoff:
"Considering all the County government's services on the one hand and taxes on the other, which of the following statements comes closest to your view: they should decrease services and taxes, keep taxes and services about where they are, or increase services and taxes?"

This year, 63.9 percent of our respondents preferred the middle path of maintaining services and taxes at roughly current levels. Another 16.2 percent said that they would cut services and taxes, whereas 8.8 percent opted for increased services and taxes, and 11.1 percent suggested some other change (see Figure VI-4). Compared to 2007, more people believed that both services and taxes should be cut ( $9.6 \%$ in 2007 versus $16.2 \%$ in 2008).

Residents with the lowest incomes ( $<\$ 35 \mathrm{k}$ ) were the mostly likely to prefer a decrease in services and taxes. Also, educational attainment was strongly related to an overall preference for similar or increased services and taxes, especially for those with graduate school education.
Figure VI-4: Preferred Level of Services and Taxes, 2008

Among those volunteering some other change, 3.7 percent suggested that services should increase while taxes decrease, 3.3 percent said that services should stay the same while taxes decrease, and 3 percent said that services should be increased while taxes stayed the same.
Respondents were also asked how satisfied they were with the value provided by the County government for their tax dollar. Figure VI-5 shows that 74.8 percent said they were satisfied with value for tax dollar, with 21 percent saying they were very satisfied. This is significantly less than the 80.2 percent who were satisfied in 2007.

## Figure VI-5: Satisfaction with Value for Tax Dollar, 2008

Some groups were more satisfied with the value for their tax dollars than others: the oldest residents (ages 65+), the newer residents (particularly those who arrived in the past 2 years), and parents with young children under age 5 (see Appendix E).
Figure VI-6 shows the level of satisfaction for these items for the current year. Table VI-1 indicates trends in satisfaction for attitudes toward government for 1993 and over the past five years.

Figure VI-6: Satisfaction with Government
Items, 2008

Table VI-1: Trends in Satisfaction with Government, 1993 and 2004-2008

PERCENT SATISFIED

## VII. Employment and Commuting

Included in the report once again this year is some information about employment and commuting patterns in Prince William County.

## Employment

Figure VII-1 shows that the respondents to our survey hold a variety of statuses in the labor force. Slightly less than two-thirds (62.3\%) were working full time and an additional 9.3 percent were working part time. Homemakers accounted for 5.4 percent, and 15.1 percent were retired. Students made up 3.1 percent of the sample, and those looking for work also made up 3.1 percent.

Figure VII-1: Employment Status, 2008

Almost a third (30.3\%) of the workers in our sample live and work in Prince William County. Slightly more than 5 percent (6.7\%) work in Manassas or Manassas Park. The remaining 63 percent work elsewhere; 27.2 percent of the workforce commute to Fairfax County, the City of Fairfax, or Falls Church, 12.5 percent work in Washington, DC, 5 percent commute to Arlington, and 4.1 percent commute to Alexandria. Figure VII-2 details these findings.

Figure VII-2: Place of Work, 2008

## Occupation and Industry

This year the survey again asked a series of questions about the specifics of each respondent's job. Just over twenty-seven percent (27.3\%) said they had some kind of specialized credential for work other than a college degree.
The survey also asked respondents several questions designed to obtain further information about the Prince William County workforce. First, respondents were asked their occupation, then the industry they were part of, and finally their employment sector. Occupation and industry were asked as open-ended questions, recorded verbatim,
and subsequently post-coded into reporting categories by CSR staff.
Prince William County residents work in a variety of settings. Just over half of the workforce (51.7\%) works in a private company, and almost twenty percent (18.7\%) work for the federal government. About twelve percent (12.3\%) work for local government, while 7.7 percent work for a non-profit organization. Almost five percent (4.9\%) own their own business, practice or farm, and 4.6 percent work for the state government.

Working respondents were also asked whether they worked in particular technology fields. Just over five percent (5.3\%) report working in research, development or design of software, and 2.5 percent said they work in manufacturing of computer hardware. Just less than two percent of respondents said they work in a biotechnology field, in pharmaceuticals, and in the manufacturing of special instruments $(1.6 \%, 1.6 \%$, and $1.9 \%$ respectively). Five percent of respondents said they work in some other research/development service.

| Own Business | 4.9 | 1.0 | $11.3 \%$ |
| State Government | 4.6 | 4.3 | $52.8 \%$ |

## Commuting

The average one-way commute time for all Prince William County workers is 38.5 minutes, a significantly lower amount of time than was reported in 2005, 2006, and 2007. For those who work in Prince William County, the mean commute time is almost 20 minutes (18.5 minutes).

Figure VII-3 illustrates the trend in overall commute time from 2003.

Figure VII-3: Average Commute Time, 20042008

Figure VII-4 shows the variation in average commute time for workers depending on the part of the County in which they reside. The longest commutes are for Broad Run and Dale residents, at 40.3 and 40.1 minutes respectively. The shortest commute time is by respondents residing in Battlefield, who commute an average of 35.4 minutes. However, these differences are not statistically significant based on the limited sample size of workers in each area.

Figure VII-4: Length of Commute by Region, 2008

As in previous surveys, we dichotomized workers into commuters and non-commuters. To be considered a commuter, a worker needed to be commuting outside of Prince William County or Manassas/Manassas Park, and have a commute of 30 minutes or longer. Just under 60 percent (56.4\%) of the employed respondents met both criteria.

Most of our respondents (81.1\%) were commuting to the same place as they were a year ago. Most were also living at the same address ( $91.4 \%$ ). Those respondents who were commuting both to the same place from the same place were asked if their commute time to and from work had gotten longer, gotten shorter, or stayed the same during the past year. The majority (57.9\%) said that their commute time had stayed the same, but just about one-third (33.7\%) of respondents said that it had gotten longer. Approximately eight percent (8.4\%) said that it had gotten shorter. Results are shown in Figure VII-5.

Figure VII-5: Change in Travel Time from Last Year, 2008

At the request of the County, we once again examined the socio-economic characteristics of commuters in more detail. Unlike in previous years, income was not correlated with commuter status. However, there has been some change from past years in those who commute.

There was a significant difference based on gender, with men being more likely (62.1\%) than women ( $50.7 \%$ ) to commute. Full-time workers (59.4\%) were much more likely to be commuters than part-time workers (36.1\%). Also, those who have lived in Prince William County for 20 years or more (45.3\%) were less likely to commute than those residing there 3 to 5 years (64.0\%) and less (63.7\%).

The oldest and youngest residents (>64 yrs \& 1825 yrs) were the least likely to commute, with only 41.5 and 46.4 percent commuting respectively. Also, residents with the status of high school graduate were significantly less likely to commute than others, with only 43.7 percent commuting.
There was also a significant difference based on geographic area of residents, but no specific pairs of areas were significantly different. Overall, residents of Forest Park were the least likely to commute and residents of Old Bridge were the most likely (see Figure VII-6).

Figure VII-6: Percent of Residents Who Commute by Region, 2008

Percent of Residents who Commute

The County was also interested in where jobs were located for commuters in each geographic area of the County. Most commuters are traveling to the Fairfax County, Arlington, and Washington DC areas. This information is detailed in Table VII-4 for commuters and Table VII-5 for both commuters and non-commuters together.

## Telecommuting

We also asked employed respondents about telecommuting. The survey asked:
"A telecommuter is someone who spends a whole day or more per week working at home or at a telecommuting center closer to home, instead of going to their main place of work. Do you ever telecommute or telework?"
About one-fifth (19.2\%) of the employed respondents said they did telecommute. This is not significantly different from last year's number of 21.2 percent. Those who said they telecommute were asked how often they did: 7.6 percent said they telecommute all the time, 28 percent said they telecommute several times a week, 21.4 percent several times a month, 23.9 percent once or twice a month, and 18.9 percent several times a year.

## VIII. Summary and Conclusion

As in prior years the 2008 annual Citizen Satisfaction Survey continues to be good news for the leadership of Prince William County in most areas of service, but with some important areas showing decreases in satisfaction. The preceding sections of this report describe residents’ predominantly high level of satisfaction with specific County services. In conclusion, we will consider the entire list of services the survey has rated.

A new feature of this year's survey is the inclusion of cell-phone respondents. This is the first year Prince William County has had the opportunity to contact people who do not have landline phone service, as previous years' surveys relied primarily on Random Digit Dialing (RDD) samples. This new sampling design, which consisted of augmenting the RDD sample with directory listed and cell-phone samples, improved the representativeness of the 2008 survey.

Another feature of this year's survey is the addition of new questions related to the County's immigration policy adopted by the County Board of Supervisors (BOCS) in July 2007 and implemented by the Police Department in Spring 2008; and new questions about crime victimization and reporting. This year's survey shows significant changes in items related to the police, with satisfaction increasing in some areas (combating gangs and illegal drugs) and decreasing in others (police attitudes). Although 80.5 percent of residents were satisfied with police efforts to enforce the new policy with respect to illegal immigrants, satisfaction with the overall performance of the Police Department decreased significantly from 92.3 percent in 2007 to 89 percent in 2008. This year, overall satisfaction with the Police appears to be related to the race or ethnicity of the respondent. For example, in 2005 when overall satisfaction was 94 percent, blacks were 91 percent satisfied and Hispanics the most satisfied at 97 percent with all others at 94 percent. This year, the rating for all others is virtually unchanged, but satisfaction among blacks had dipped to 85 percent and Hispanic satisfaction with police has decreased to 73 percent.

Satisfaction with the Police Department attitudes and behaviors towards citizens also decreased significantly from 87.9 percent in 2007 to 79.3 percent in 2008. The changes of perceptions in police performance may reflect, to some extent, the conflicting opinions in the community about the policy itself, which were evident in the openended comments from respondents about its enforcement.

Table VIII-1 shows the satisfaction ratings for the services and programs, in the order in which they were discussed in the preceding sections, for this year and for the most recent five years in which a specific satisfaction item has been included in the survey. The superscripted numbers in this table indicate statistically significant changes in satisfaction levels between years, including between this year and any of the fifteen preceding years.

## Changes from Prior Years

Overall satisfaction with County services was 89.4 percent, a rating that is nearly the same as that of last year (89.5\%). There were a number of significant increases and decreases on satisfaction items from 2007 (or 2006 for the rotating questions).

About six out of ten respondents (58.6\%) said that they felt that the County could be trusted most of the time or just about always. These opinions show a significant decrease from the 64.1 percent reported in 2007.

## Fifteen Items Showed Increases in Satisfaction

## Core Satisfaction Items:

- Satisfaction with the Prince William County's growth rate increased from 44 percent in 2007 to 56.1 percent in 2008.
- Satisfaction with the job the County is doing in planning how land will be used and developed in the County increased from 47.5 percent in 2007 to 56.4 percent in 2008.
- Satisfaction with opportunities for citizen input on the planning process in the County increased from 66.6 percent in 2007 to 74.9 percent in 2008.
- Satisfaction with the visual appearance of new development in the County increased from 78.5 percent in 2007 to 84.5 percent in 2008.
- Satisfaction with the way residential and business development is coordinated with the transportation and road systems increased from 35.5 percent in 2007 to 48.6 percent in 2008.
- Satisfaction with the job the County is doing in providing street lighting where it's needed in the County increased from 73.8 percent in 2007 to 84.7 percent in 2008.
- Satisfaction with the job the County is doing in providing convenient ways for people to register to vote increased from 94.9 percent in 2007 to 97 percent in 2008.
- Satisfaction with the Police Department's effort to reduce the use of illegal drugs increased from 83.2 percent in 2007 to 87.7 percent in 2008.
- Overall satisfaction with Community Services Board (CSB) services increased from 73.9 percent in 2007 to 86.9 percent in 2008.
- Overall satisfaction with Community Services Board (CSB) services to people with mental retardation increased from 73.3 percent in 2007 to 85.6 percent in 2008.
- Overall satisfaction with Community Services Board (CSB) services to people with substance abuse problems increased from 63.7 percent in 2007 to 80.4 percent in 2008.
- Satisfaction with the ease of travel or getting around within Prince William County increased from 46.9 percent in 2007 to 54.6 percent in 2008.
- Satisfaction with the ease of travel or getting around Northern Virginia outside Prince William County increased from 27.7 percent in 2007 to 37.2 percent in 2008.
- Satisfaction with the County's landfill services increased from 96 percent in 2007 to 98.3 percent in 2008.

## Rotating Satisfaction Items:

- Satisfaction with the police department's efforts to combat gang activity increased from 76.1 percent in 2006 to 84.7 percent in 2008.

## Eight Items Showed Decreases in Satisfaction:

## Core Satisfaction Items:

- General satisfaction with the job the County is doing in giving residents value for their tax dollar decreased from 80.2 percent in 2007 to 74.8 percent in 2008.
- Satisfaction with the overall performance of the Police Department decreased from 92.3 percent in 2007 to 89 percent in 2008.
- Satisfaction with the Police Department attitudes and behaviors towards citizens decreased from 87.9 percent in 2007 to 79.3 percent in 2008.
- Satisfaction with the job the County is doing in providing emergency medical rescue services decreased from 98.5 percent in 2007 to 95.8 percent in 2008.
- Satisfaction with safety from crime during daylight hours decreased from 94.3 percent in 2007 to 91.9 percent in 2008.
- Satisfaction with the job the County is doing in providing programs to help the County's elderly population decreased from 83.2 percent in 2007 to 77.2 percent in 2008.
- Satisfaction with the County Website decreased from 93.9 percent in 2007 to 90 percent in 2008.

## Rotating Satisfaction Items:

- Satisfaction with the job the County is doing in providing help to people in financial need decreased from 76.7 percent in 2006 to 69.1 percent in 2008.

## Long-Term Trends

The overall long-term picture remains positive: a combination of steady rates of satisfaction in some indicators and sustained improvement in others over the annual surveys. Prince William County residents are on the whole very satisfied with their County government and quality of life. On most satisfaction items included in the 2008 survey where significant changes in citizen satisfaction have occurred since the baseline survey taken in 1993, changes have been in the direction of greater satisfaction or continued high levels of satisfaction with minor fluctuations from year to year.
The indicators showing a general trend of improvement since 1993 are as follows:

- Satisfaction with the County's value for tax dollars is up more than 9 percentage points since 1993.
- Satisfaction with helping the elderly is up approximately 9 percentage points since 1993.
- Satisfaction with information on government services is up over 10 percentage points since 1993.
- Satisfaction with the landfill is up almost 7 percentage points since 1993.
- Satisfaction with providing help to those in financial need is up over 8 percentage points since 1993.
- Satisfaction with the police department's efforts to reduce the use of illegal drugs is up over 8 percentage points since 1993.
- Satisfaction with voter registration is up over 5 percentage points from 1993.
- Satisfaction with street lighting is up over 13 percentage points since 1993.

This year represents an upturn in satisfaction with items pertaining to development, growth, and transportation issues. Satisfaction for these items has trended downward in the past few years. For example, satisfaction with the County growth rate, which was rated at 44 percent in 2007, decreased from 48.7 percent in 2004 to 44.5 percent in 2006. This year, satisfaction with the County growth's rate was rated at 56.1 percent, a significant increase in satisfaction. Satisfaction with ease of travel or getting around Prince William County and satisfaction with ease of getting around Northern Virginia outside of Prince William County increased significantly from their 2005 ratings ( $38.1 \%$ and $24.5 \%$, respectively) to 54.6 percent and 37.2 percent, respectively in 2008.
Items related to mental health services also show a significant upturn compared to recent years.
Of the 2008 satisfaction items, twenty-two were asked of respondents in 1993. None of this year's ratings had decreased significantly from their 1993 ratings.

## Overall Quality of Life

With regard to overall quality of life, Prince William County remains a place that people believe is a good place to live. On a scale of 1 to 10 , with 10 being the highest quality, the mean rating has increased from 6.90 in 1993 to 7.18 in 2007, a statistically significant improvement. In 2008, the quality of life is rated at 6.98 , a mean rating which is not statistically significant from last year's mean of 7.18. It is worth noting that if this year's survey had relied solely on sampling landline households, as in prior years, this year's mean rating for the quality of life would have been virtually unchanged: 7.12

## Services Ranked by Satisfaction Level

Table VIII-2 provides a list of satisfaction items, ranked from those with the highest levels of satisfaction to those with the lowest. The respondents rated 61 specific services and a general rating of satisfaction with government services and quality of life in Prince William County, for a total of 62 satisfaction items. The highest rated satisfaction items in our survey related to security in the Courthouse, the libraries, the compost facility, medical rescue, fire protection, security in the Courthouse, the landfill, overall performance of the Sheriff's Office, and opportunities for voter registration. Forty-two of the 61 ranked satisfaction items scored ratings of 80 percent or better. Five items received ratings of less than 60 percent: satisfaction with ease of travel around Northern Virginia outside of Prince William County, coordination of development with road systems, growth in the County, ease of travel around Prince William County, and planning and land use.
The general County government rating, perhaps the single most important item in the survey, has a high satisfaction level of 89.4 percent. Nearly a third said they were "very satisfied" with the services of the County government in general.
Table VIII-3 ranks all satisfaction items for 2008 by visibility. The visibility refers to the percentage of County residents who are sufficiently familiar with a service to be able to rate it. For example, if 10 percent of those asked about a service say they do not know how to rate it or do not have an opinion about its rating, then that service has a visibility of 90 percent. For some services, we specifically asked respondents a screening question to determine if they were familiar enough with a particular service to give it a rating.

Table VIII-4 is a list of all satisfaction items, categorized by level of visibility and satisfaction level. Figure VIII-1 illustrates those numbers graphically.

## Conclusions

Overall, residents of Prince William County are satisfied with the services they receive. Reductions in satisfaction levels on some items also indicate areas where improvements might be made. As indicated earlier, the reasons for
citizens' satisfaction with any particular service relates not merely to its actual quality, but also to citizens' expectations of its quality, or to their own informal cost-benefit analyses regarding the usefulness of a given service or policy to them. These figures are subject to change as people's life circumstances and expectations change. In addition, a citizen satisfaction survey is only one of many possible indicators of the actual quality of the work a public agency is doing, and the findings must of course be weighed against other objective and qualitative indicators when policy and resource allocation decisions are made.

Prince William County certainly can take continuing pride in the high levels of satisfaction its citizens have indicated toward most County government agencies, services and programs, and in the general improvement in citizen satisfaction levels, both overall and with several specific areas since 1993, the first year the survey was conducted. There is no doubt this survey series will continue to be of help to decision-makers and citizens as they work toward continuous improvement of public services and programs for the people of Prince William County.

Table VIII-1: Percent Satisfied for All Satisfaction Items, 1993 and 2004-2008

| Item Number | Satisfaction Item | 1993 | 2004 | 2005 | 2006 | 2007 | 2008 |

* This question was also asked prior to 2004, but due to the addition of a screener question in 2004, responses prior to 2004 are not directly comparable with those from 2004 and 2005. Only the responses of those that were asked the screener question in 2004 (approximately half of the respondents) are included in this comparison. The figure that appears in this table therefore differs from the one that appeared in the 2004 report, which was a composite of those that were asked the screener and those that were not.

 Questionnaire
## PRINCE WILLIAM SURVEY QUESTIONNAIRE (2008) ${ }^{1}$

## INTRO SECTION FOR LISTED AND RDD SAMPLES

\{Q: INTRO\}
Hello. My name is $\qquad$ and I'm calling on behalf of the Prince William County Government. Each year we conduct a survey to find out how satisfied people are with the services that the County provides. Your household was selected at random to be part of our sample this year. Prince William County will be using the results to try to improve its services and programs.

## 1 NO ANSWER <br> 2 BUSY <br> 3 ANSWER MACHINE <br> 4 BAD NUMBER

## 5 IMMEDIATE HANGUP <br> 6 IMMEDIATE REFUSAL <br> 7 CALLBACK <br> 8 GO ON

## [IF FINISHING INCOMPLETE SURVEY]

Hello. My name is $\qquad$ and I'm calling on behalf of the Prince William County Government. We're doing a survey to find out how satisfied people are with the services that the County provides. Your household was selected at random to be part of our sample, and we had started a survey with someone in your home but were unable to complete it. Would this be a good time to finish up the questions?

## INTERVIEWER: PRESS ‘1’ TO GO ON OR CTRL-END FOR DISPOSITION OR CALLBACK

\{Q: INTRO2\}

## [CONTINUATION OF INTRO AS NECESSARY HERE]

[IF APPROPRIATE: We can conduct the interview in English or Spanish. Which would you prefer?]

1 ENGLISH - GO ON
2 SPANISH - GO ON
3 CALL BACK
4 CALL BACK WITH SPANISH SPEAKER
9 REFUSED

INTERVIEWER: IF NECESSARY - We're calling from the University of Virginia on behalf of Prince William County. We're not selling anything. We're conducting a survey of Prince William residents which we do each year for the County.

[^12]\{Q: ADULTRES\}
First, I need to confirm that you are at least 18 years old, and that you live at the residence I am calling. [IF NECESSARY SAY: Your answers are confidential, and we don't use anybody's name.]

1 R IS RESIDENT ADULT, PROCEED
2 R IS NOT RESIDENT OR ADULT, WE NEED TO GET ONE
3 REFUSED
\{Q: ADCOME $\}$

## If $R$ is not resident or adult in ADULTRES, ASK

Can you ask someone 18 or older who lives in your house to come to the phone?

$$
\begin{array}{ll}
1 & \text { YES, ASKING RESIDENT ADULT TO COME TO THE PHONE } \\
2 & \text { NO, CAN’T ASK RESIDENT ADULT TO COME TO THE PHONE } \\
3 & \text { REFUSES TO ASK RESIDENT ADULT TO COME TO PHONE }
\end{array}
$$

\{Q: ADCALLBK\}

## If NO to ADCOME, ASK

Would it be possible to reach an adult at another time?
1 YES, SCHEDULE CALLBACK
2 NO (OR NOT SURE), ADULT NOT AVAILABLE DURING STUDY PERIOD
3 REFUSED
\{Q: REINTRO\}
Hello, my name is $\qquad$ and I'm calling on behalf of the Prince William County Government. Each year we conduct a survey to find out how satisfied people are with the services that the County provides. Prince William County will be using the results to try to improve its services and programs. Your household was selected at random to be part of our sample this time. Would you be willing to help us out by answering a few questions?

1 R1 READY, PROCEED
2 R1 CALLBACK [WON'T NEED NAME]
3 R1 REFUSED
\{Q: CONFIRM\}
I also need to confirm that you are a resident of Prince William County, and that you are not located on-post at Quantico. In what city or county do you live?
IF R IS NOT SURE, ASK: Where do you go to get the tax sticker for your car or truck?

```
PRINCE WILLIAM COUNTY
MANASSAS CITY [IN CITY LIMITS]
MANASSAS PARK [IN CITY LIMITS]
FAIRFAX COUNTY
LOUDOUN COUNTY
FAUQUIER COUNTY
```

[If answer is different from PWC then TERMINATE] [If in Quantico but not on-post proceed with interview]
\{Q: HOWMANY\}
First of all, could you please tell me how many adults 18 and over there are in your household including yourself? TYPE "99" FOR REFUSED (GO TO Q: LASTBDA2)

If there is only 1 person in the household, then skip to R1GO. If there are 2 persons in the household, then $50 \%$ skip to R1GO and the other $50 \%$ go on to the next question.
If there are 3 persons in the household, then $33 \%$ skip to R1GO and the other $67 \%$ go on to the next question.
If there are 4 persons in the household, then $25 \%$ skip to R1GO and the other $75 \%$ go on to the next question.
And so on.
\{Q: LASTBDAY\}
The computer has randomly determined that one of the adults other than yourself should be selected for the rest of the interview.

To help us select this person, do you know who has had the most recent birthday among these adults? [IF NECESSARY SAY: I don't mean the youngest person in your house; I mean the last one to have had a birthday according to the calendar.]

```
1 R1 says YES, KNOWS OTHER ADULT HAD LAST BIRTHDAY
2 R1 SAYS DOESN'T KNOW WHO HAD LAST BIRTHDAY
3 REF TO SAY WHO HAD LAST BIRTHDAY / R1 REFUSES TO CONTINUE
If answer = 1 then skip to R2COME
If answer = 2 then go on to R2KISH
If answer = 3 TERMINATE
```

\{Q: LASTBDA2 \}
IF (HOWMANY = 99)
Then our next selection criterion is to select the person who has had the most recent birthday among adults in the household. Do you know who that is or would that be you?
IF NECESSARY: I mean the resident over 18 to have had a birthday
1 R1 says YES, I HAD LAST BIRTHDAY
2 R1 says YES, KNOWS OTHER ADULT HAD LAST BIRTHDAY
3 R1 SAYS DOESN'T KNOW WHO HAD LAST BIRTHDAY
4 REF TO SAY WHO HAD LAST BIRTHDAY / R1 REFUSES TO CONTINUE
If answer $=1$ then skip to R1GO
If answer $=2$ then skip to R2COME
If answer $=3$ or 4 TERMINATE
\{Q: R2KISH\}
If you do not know the last birthday person, could you tell me the first name of the other adults in the household?

```
1 R1 SAYS YES
2 R1 DOESN'T KNOW
3 R1 REFUSES TO CONTINUE
```

\{Q: R2Names \}
Now, the computer will randomly select a name from the list of names as you tell them to me. Please say the names now

INTERVIEWER: HIT 1 EACH TIME A NAME IS SPOKEN OUT
\{Q: R1GO \}
Okay, let's move on to the rest of the survey, which should take about 15 minutes. I want to remind you that all of your answers are confidential, and you can decline to answer any question at any time. This survey is being conducted by the Center for Survey Research at the University of Virginia. If you have any questions as we go along, please feel free to ask.

1 R1 READY, [GO TO CELLPHONE]
2 R1 CALLBACK [GET NAME OF R1 FOR CALLBACK MESSAGE LINE]
3 R1 REFUSED
\{Q: R2COME \}

## If LASTBDAY is other adult, ASK

Can you ask that person to come to the phone?
1 YES, R1 ASKING R2 TO COME TO PHONE
2 NO, CAN'T ASK R2 TO COME TO PHONE
3 R1 REFUSES TO ASK PERSON TO COME TO PHONE
\{Q: R2CALLBK \}

## If NO to R2COME, ASK

Would it be possible to reach this person at another time?
1 YES, SCHEDULE CALLBACK
2 NO (OR NOT SURE), R2 IS NOT AVAILABLE DURING STUDY PERIOD
3 REFUSED
\{Q: R2INTRO \}

## If R2 IS SELECTED to NEWBDAY, ASK

Hello, my name is $\qquad$ and I'm calling on behalf of the Prince William County Government. Each year we conduct a survey to find out how satisfied people are with the services that the County provides. Prince William County will be using the results to try to improve its services and programs. Your household was selected at random to be part of our sample this time, and you have been selected at random from all the adults in your household to complete the rest of the survey. Would you be willing to help us out by answering a few questions?

1 R2 READY, [GO TO CELLPHONE]
2 R2 CALLBACK [GET NAME OF R2 FOR CALLBACK MESSAGE LINE]
4 R2 CAME TO PHONE, BUT REFUSED [WE CANNOT SWITCH BACK TO R1]
3 R2 WOULD NOT COME TO PHONE [CANNOT SWITCH BACK TO R1]

## If R2 READY to R2INTRO, ASK

Okay, let's move on to the rest of the survey, which should take about 15 minutes. I want to remind you that all of your answers are confidential, and you can decline to answer any question at any time. This survey is being conducted by the Center for Survey Research at the University of Virginia. If you have any questions as we go along, please feel free to ask.

1 R2 READY [GO TO CELLPHONE]
2 R2 CALLBACK [GET NAME OF R2 FOR CALLBACK MESSAGE LINE]
3 R2 REFUSES
INTRO SECTON FOR CELL PHONE SAMPLE
\{Q: INTRO $\}$
Hello. My name is $\qquad$ and I'm calling on behalf of the Prince William County Government. Each year we conduct a survey to find out how satisfied people are with the services that the County provides. You were randomly selected to be part of our sample this year. Qualified respondents will be compensated $[\$ 5 / \$ 10]$ for answering our questions. If you are currently doing any activity that requires your full attention, I need to call you back at a later time. If you would prefer, I would be happy to call you back on a landline phone to conduct this interview at a time that is convenient for you. Prince William County will be using the results to try to improve its services and programs.

Hello. My name is $\qquad$ and I'm calling on behalf of the Prince William County
Government. We're doing a survey to find out how satisfied people are with the services that the County provides. You were selected at random to be part of our sample, and we had started a survey with you but were unable to complete it. Would this be a good time to finish up the questions?
\{Q: INTRO2\}

## [CONTINUATION OF INTRO AS NECESSARY HERE]

[IF APPROPRIATE: We can conduct the interview in English or Spanish. Which would you prefer?]

1 ENGLISH - GO ON
2 SPANISH - GO ON
3 CALL BACK
4 CALL BACK WITH SPANISH SPEAKER
9 REFUSED
INTERVIEWER: IF NECESSARY - We're calling from the University of Virginia on behalf of Prince William County. We're not selling anything. We're conducting a survey of Prince William residents which we do each year for the County.

First, I need to confirm that you are at least 18 years old.
1 YES
2 NO [TERMINATE]
8 DON'T KNOW/REFUSED
[IF NO, OR DON'T KNOW/REFUSED SAY:
Thank you very much, but we are only interviewing persons aged 18 or older at this time.
\{Q: CONFIRM2\}
I also need to confirm that you are a resident of Prince William County, and that you are not located on-post at Quantico. In what city or county do you live?
IF R IS NOT SURE, ASK: Where do you go to get the tax sticker for your car or truck?

PRINCE WILLIAM COUNTY
MANASSAS CITY [IN CITY LIMITS]
MANASSAS PARK [IN CITY LIMITS]
FAIRFAX COUNTY
LOUDOUN COUNTY
FAUQUIER COUNTY
[If answer is different from PWC then TERMINATE]
[If in Quantico but not on-post proceed with interview]
CULPEPER COUNTY STAFFORD COUNTY OTHER LOC. NOT IN PWC ON-POST AT QUANTICO DON'T KNOW/REFUSED

To begin we have a few questions about how we reached you.
Are we speaking to you on a cellular telephone?
[IF NECESSARY SAY: By cellular telephone, we mean a telephone that is mobile and usable outside of your neighborhood.]
1 YES [GO TO CELLUSE]
2 NO
9 DON'T KNOW/REFUSED
\{Q: LANDLINE\}
Then is this a landline or regular phone located in your home?
1 YES
2 NO
3 NO [VOICE OVER IP]
9 DON'T KNOW/REFUSED
IV: VOICE OVER IP ALSO KNOWN AS VOICE OVER INTERNET PROTOCOL SERVICE OR VOIP RESPONDENT MAY SAY "make calls over internet" OR MENTION "web services such as Skype" TO INDICATED VOIP
\{Q: OWNCELL\}
Do you also have a cell phone for your personal use?
1 YES [GO TO ZIPCODE]
2 NO [GO TO ZIPCODE]
9 DON'T KNOW/REFUSED [GO TO ZIPCODE]

Is this cell phone used for ...?
1 Personal use only
2 Business use only or [TERMINATE]
3 Personal and business use
8 DON'T KNOW/NOT SURE
9 REFUSED
\{Q: HAVELINE\}
Do you also have a regular telephone at home?
[IF NECESSARY SAY: By regular telephone, we mean a land line telephone]
YES
NO
YES, VOICE OVER INTERNET PROTOCOL SERVICE (VOIP) [VOLUNTEERED]
8 DON'T KNOW/NOT SURE
9 REFUSED
\{Q: ZIPCODE $\}$
Could you tell me the correct ZIP code for your address [just 5 digits]:
[INTERVIEWERS: BE SURE RESPONDENT IS GIVING NEW ZIPCODE = AS OF JULY 1998]

| 20109 | 20143 | 22134 |
| :--- | :--- | :--- |
| 20110 | 20155 | 22172 |
| 20111 | 20169 | 22191 |
| 20112 | 20181 | 22192 |
| 20119 | 22025 | 22193 |
| 20136 | 22026 | OTHER |
| 20137 | 22125 | DON’T KNOW/REFUSED |

[IF NECESSARY: We dialed your number at random, so I don't know your address.]
\{Q: INTRSCTN \}

## If DON'T KNOW or REFUSED to ZIPCODE, ASK

Please think of the nearest major intersection to your house. Could you tell me the names or route numbers of the roads that cross there?
[IF NECESSARY: We've dialed your number at random and we don't want to know your address--all your answers on this survey are confidential.]
\{Q: HOWLONG \}
How long have you lived in Prince William County?
1 Less than one year
2 One to two years
3 Three to five years
4 Six to ten years
5 Eleven to nineteen years
6 Twenty years or more, but not all my life
7 All my life
8 NOT SURE
9 REFUSED
[DEFINITION: COUNT TOTAL TIME THAT R HAS EVER RESIDED WITHIN THE COUNTY ITSELF--DON'T COUNT CITY RESIDENCE TIME.]
\{Q: PREVRES\}

## If LESS THAN FIVE YEARS to HOWLONG, ASK

Where did you live before moving to Prince William County?

| 01 MANASSAS | 09 ALEXANDRIA |
| :--- | :--- |
| 02 MANASSAS PARK | 10 RICHMOND CITY OR AREA |
| 03 STAFFORD COUNTY | 11 ELSEWHERE IN VIRGINIA |
| 04 FREDERICKSBURG/SPOTSYLVANIA | 12 WASHINGTON, D.C. |
| 05 FAUQUIER COUNTY/WARRENTON | 13 MARYLAND |
| 06 LOUDOUN COUNTY | 14 ANOTHER LOCATION |
| [SPECIFY...] |  |

| 08 ARLINGTON |  |

\{Q: OWNHOME \}
Do you own your own home, or are you renting?
1 Owns [Dwelling is owner-occupied]
2 Rents
3 Other [SPECIFY:]
8 DON'T KNOW
9 REFUSED

And what kind of place are you living in? Is it a...
1 Single-family home,
2 A duplex or townhouse,
3 An apartment or condominium [MULTI-FAMILY UNIT WITH 3 OR MORE UNITS]
4 A mobile home or trailer, or
5 Some other kind of structure? [SPECIFY:]
8 DON'T KNOW
9 REFUSED
\{Q: QOL10\}
We'd like first to get a sense of your overall impression about Prince William County.
Please imagine a scale from 1 to 10 , where 1 represents the worst possible community in which to live and 10 represents the best possible community. Where on that scale would you rate Prince William County as a place to live?

$$
\begin{array}{cccccccccc}
1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 & 10 \\
\text { WORST } & & & & & & \text { BEST }
\end{array}
$$

98 DON'T KNOW/UNABLE TO RATE
99 REFUSED
\{Q: YR5AGOB\}

## If LONGER THAN FIVE YEARS to HOWLONG, ASK

Where on the same 1 to 10 scale would you say that Prince William County stood five years ago?

```
            1
                WORST BEST
```

98 DON'T KNOW/UNABLE TO RATE
99 REFUSED
\{Q: FUTUREB\}

## ASK OF 57\% OF RESPONDENTS

Now, thinking about the future, where on the same 1 to 10 scale would you say that Prince William County will stand five years from now?

$$
\begin{array}{cccccccccc}
1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 & 10 \\
\text { WORST } & & & & & & \text { BEST }
\end{array}
$$

98 DON'T KNOW/UNABLE TO RATE
99 REFUSED
\{Q: HPELIVB\}
Would you like to be living in Prince William County five years from now, or do you hope to be living someplace else by then?

1 PRINCE WILLIAM COUNTY
2 MANASSAS/MANASSAS PARK [VOLUNTEERED]
3 SOMEPLACE ELSE
8 DON'T KNOW
9 REFUSED
\{Q: CTYSAT97\}
One of our main purposes in doing this survey is to find out how satisfied residents of Prince William are with services they receive from the County. Before I ask you about any specific services, I'd like to ask you how satisfied you are in general with the services the County provides. Are you...

```
1 VERY SATISFIED
2 SOMEWHAT SATISFIED
3 SOMEWHAT DISSATISFIED
4 VERY DISSATISFIED
D DON'T KNOW/UNABLE TO RATE
9 REFUSED
```

\{Q: SATCHG\}

## ASK OF 70\% OF RESPONDENTS

Thinking back over the past year, would you say that your satisfaction with services provided by the Prince William County government has increased, decreased, or stayed about the same?

1 Increased/more satisfied
2 Decreased/less satisfied
3 Stayed about the same
8 DON'T KNOW
9 REFUSED
\{Q: LISTSERV\}
Now I have several brief lists of services to ask you about. For each one I'd like you to tell me whether you are very satisfied, somewhat satisfied, somewhat dissatisfied, or very dissatisfied with the job the County is doing.

If you don't feel you can rate a particular service, just say so.
\{Q: VOTE $\}$
ASK OF 75\% OF RESPONDENTS
First, how satisfied are you with the job the County is doing in providing convenient ways for people to register to vote?

1 VERY SATISFIED
2 SOMEWHAT SATISFIED
3 SOMEWHAT DISSATISFIED
4 VERY DISSATISFIED
8 DON'T KNOW/UNABLE TO RATE
9 REFUSED
\{Q: VOTEYEAR\}
In the past year, have you gone to a voting precinct in Prince William County to vote in any election?

1 YES
2 NO
8 CAN'T RECALL/DON'T KNOW
9 REFUSED
\{Q: PCTUP $\}$
ASK IF VOTEYEAR=1
How satisfied are you with the efficiency and effectiveness of the voting precinct set-up for handling voters on election days?

1 VERY SATISFIED
2 SOMEWHAT SATISFIED
3 SOMEWHAT DISSATISFIED
4 VERY DISSATISFIED
8 DON'T KNOW/UNABLE TO RATE
9 REFUSED
\{Q: GOVTSERV\}
ASK OF 75\% OF RESPONDENTS
How satisfied are you with the job the County is doing in keeping residents(67\%)/citizens(33\%) informed about County government programs and services?

1 VERY SATISFIED
2 SOMEWHAT SATISFIED
3 SOMEWHAT DISSATISFIED
4 VERY DISSATISFIED
8 DON'T KNOW/UNABLE TO RATE
9 REFUSED

ASK OF 75\% OF RESPONDENTS
How satisfied are you with the job the County is doing in providing street lighting where it's needed in the County?

1 VERY SATISFIED
2 SOMEWHAT SATISFIED
3 SOMEWHAT DISSATISFIED
4 VERY DISSATISFIED
8 DON'T KNOW/UNABLE TO RATE
9 REFUSED
\{Q: FIRE $\}$
How satisfied are you with the job the County is doing in fire fighting in your area?
1 VERY SATISFIED
2 SOMEWHAT SATISFIED
3 SOMEWHAT DISSATISFIED
4 VERY DISSATISFIED
8 DON'T KNOW/UNABLE TO RATE
9 REFUSED
\{Q: RESCUE $\}$

## ASK OF 75\% OF RESPONDENTS

How satisfied are you with the job the County is doing in providing emergency medical rescue services?

1 VERY SATISFIED
2 SOMEWHAT SATISFIED
3 SOMEWHAT DISSATISFIED
4 VERY DISSATISFIED
8 DON'T KNOW/UNABLE TO RATE
9 REFUSED
\{Q: POLINTRO\}
Now I'd like to ask about some other services having to do with crime and the police department.
\{Q: AMCRIME \}
How satisfied are you with safety from crime in your neighborhood during daylight hours?

[^13]\{Q: PMCRIME \}

8 DON'T KNOW/UNABLE TO RATE
9 REFUSED
\{Q: DRUGS \}
ASK OF 75\% OF RESPONDENTS
How satisfied are you with the police department's efforts to reduce the use of illegal drugs?
1 VERY SATISFIED
2 SOMEWHAT SATISFIED
3 SOMEWHAT DISSATISFIED
4 VERY DISSATISFIED
8 DON'T KNOW/UNABLE TO RATE
9 REFUSED
\{Q: GANGS \}
ASK OF 77\% OF RESPONDENTS
How satisfied are you with the police department's efforts to combat gang activity?
1 VERY SATISFIED
2 SOMEWHAT SATISFIED
3 SOMEWHAT DISSATISFIED
4 VERY DISSATISFIED
8 DON'T KNOW/UNABLE TO RATE
9 REFUSED

## ASK OF 75\% OF RESPONDENTS

How satisfied are you with the overall performance of the police department?
1 VERY SATISFIED
2 SOMEWHAT SATISFIED
3 SOMEWHAT DISSATISFIED
4 VERY DISSATISFIED
8 DON'T KNOW/UNABLE TO RATE
9 REFUSED
\{Q: VCRIME \}
Thinking back over the past twelve (12) months, were you or anyone in your household the victim of ANY crime?

1 YES
2 NO
8 CAN'T RECALL/DON'T KNOW
9 REFUSED
\{Q: VCRIMER\}
Ask if VCRIMER = 1
Did you report it to the Prince William County Police Department?
1 YES
2 NO
8 CAN'T RECALL/DON'T KNOW
9 REFUSED
\{Q: VCRIMNR\}
Ask if VCRIME $=2$
What are reasons you did not report it to the Prince William County Police Department?
[OPEN END]
\{Q: CRMTYPES\}
Ask if VCRIME $=1$
What types of crime were you a victim of?
[OPEN END]
\{Q: PPOLICY\}
The Prince William County Board of County Supervisors recently ordered the Dept of Police to be more active in checking the citizenship or immigration status of people, to see if they are in violation of federal immigration law. How satisfied are you with the job the Police Department is doing in carrying out this policy? Are you . . .

1 Very Satisfied
2 Somewhat Satisfied
3 Somewhat Dissatisfied
4 Very Dissatisfied
7 DECLINES TO RATE (OPPOSES POLICY) (VOLUNTEERED)
8 DON'T KNOW/UNABLE TO RATE
9 REFUSED

IV: If R SAYS OPPOSED TO POLICY, SAY: We realize that opinions are divided on the policy. Would you be able to rate the job the police department is doing in carrying out the policy?
IF INSISTS THAT CANNOT RATE: Select all caps option 7
IF SAYS POLICY CHANGED: In July 2007, the Board ordered the Dept of Police to inquire into the citizenship or immigration status of detained persons when they are stopped and there's probable cause to believe the person is in violation of federal immigration law. In late April 2008, the policy was modified and it now applies only to persons who are actually placed under arrest. Taking into account the old and new policies together, are you . . .
\{Q: WPOLSAT1\}
Ask if PPOLICY = 1
What are some reasons you are very satisfied with the job the Police Department is doing in carrying out this policy?
[OPEN END]
\{Q: WPOLSAT2\}
Ask if PPOLICY $=4$
What are some reasons you are very dissatisfied with the job the Police Department is doing in carrying out this policy?
[OPEN END]
\{Q: COURT\}
In the past year, have you had occasion to visit the Judicial Center? That's the courthouse in downtown Manassas.

1 YES, VISITED IN LAST 12 MONTHS
2 NO, HAS NOT VISITIED
8 CAN'T RECALL/DON'T KNOW
9 REFUSED

## If YES to COURT, ASK

How satisfied were you with the level of security in the courthouse? Would you say you are . . .

1 VERY SATISFIED
2 SOMEWHAT SATISFIED
3 SOMEWHAT DISSATISFIED
4 VERY DISSATISFIED
8 DON'T KNOW/UNABLE TO RATE
9 REFUSED
\{Q: CTYSHERF\}
Are you familiar enough with the services of the Prince William Sheriff's Office to tell us how satisfied you are with them?

1 YES - familiar enough to rate
2 NO - not familiar ((SKIP TO COURT)
8 DON’T KNOW/NOT SURE (SKIP TO COURT)
9 REFUSED (SKIP TO COURT)
\{Q: ATTITUT\}
If YES to CTYSHERF, ASK
How satisfied are you with Sheriff's Office attitudes and behaviors toward residents (67\%) / citizens (33\%)?

1 VERY SATISFIED
2 SOMEWHAT SATISFIED
3 SOMEWHAT DISSATISFIED
4 VERY DISSATISFIED
8 DON'T KNOW/UNABLE TO RATE
9 REFUSED
\{Q: SHERIFFA\}

## If YES to CTYSHERF, ASK

How satisfied are you with the overall performance of the Sheriff's Office?
1 VERY SATISFIED
2 SOMEWHAT SATISFIED

## [IV: IF TELECOMMUTE, ASK HOW LONG IT TAKES IF/WHEN THEY DO DRIVE]

\{Q: COMMTIME $\}$

## If WORKING FULL TIME or WORKING PART TIME to WORK, ASK

During the past year, has your commuting time to and from work gotten longer, gotten shorter or stayed about the same?

1 Gotten longer
2 Gotten shorter
3 Stayed about the same
4 NOT WORKING ONE YEAR AGO [VOLUNTEERED]
8 DON'T KNOW
9 REFUSED
\{Q: TELECOM\}

## If WORKING FULL TIME or WORKING PART TIME to WORK, ASK

Now we'd like to ask about telecommuting or teleworking. A telecommuter is someone who spends a whole day or more per week working at home or at a telecommuting center closer to home, instead of going to their main place of work.

Do you ever telecommute or telework?

$$
\begin{array}{ll}
1 & \text { Yes } \\
2 & \text { No } \\
3 & \text { Home is main place of work } \\
8 & \text { DON'T KNOW } \\
9 & \text { REFUSED }
\end{array}
$$

## If YES to TELECOM, ASK

In the past 12 months, how often have you telecommuted or teleworked?
1 All the time
2 Several times a week but not every day
3 Several times a month
4 Once or twice a month
5 Several times a year
8 DON'T KNOW
9 REFUSED
\{Q: OUTRO\}
There are just a couple of final questions. As I mentioned, all of your answers are strictly confidential, and you can skip any questions you don't wish to answer.
\{Q: GENDER \}
[ENTER RESPONDENT"S GENDER: ASK ONLY IF NECESSARY: SAY: "The survey requires that you tell me your gender."]

3 MALE
4 FEMALE
8 DON'T KNOW/CAN'T TELL
9 REFUSED
\{Q: MARITAL\}
What is your current marital status? Are you married, separated, divorced, widowed, or have you never been married?

1 MARRIED
2 SEPARATED
3 DIVORCED
4 WIDOWED
5 NEVER MARRIED
9 REFUSED
\{Q: EDUC \}
What is the highest level of education you completed?
1 Less than $9^{\text {th }}$ grade
$29^{\text {th }}-12^{\text {th }}$, but did not finish high school
3 High school graduate
4 Some college but no degree
52 year college degree/A.A./A.S.
64 year college degree/B.A./B.S.
7 SOME GRADUATE WORK
8 COMPLETED MASTERS OR PROFESSIONAL DEGREE
9 ADVANCED GRADUATE WORK OR PH.D.
10 DON'T KNOW
11 REFUSED
\{Q: INCOME \}
I am going to read a list of income ranges. Would you please stop me when I read the range that best describes your annual household income from all sources? That would be before taxes and other deductions.
[PRECISE CATEGORIES: ]

| 1 | Less than 15 thousand? | $[\$ 0$ |

| 9 | DON'T KNOW/REFUSED/NO ANSWER |  |

\{Q: HISPANIC\}
Do you consider yourself to be of Hispanic origin?
1 Yes
2 No
9 DON'T KNOW/REFUSED
\{Q: RACE \}
Finally, I am going to read a list of racial categories. Would you tell me what category best describes you?

1 White
2 [READ ONE:] African American / Black
3 Asian [INCLUDE SOUTH ASIAN]
4 American Indian [NATIVE AMERICAN; INCLUDES ESKIMO, ALEUT]
5 Pacific Islander
6 OTHER [SPECIFY]
9 REFUSED/NO ANSWER
[IF NECESSARY: Many Hispanic people may identify with a particular racial group, in addition to being Hispanic. They may think of themselves as "Black Hispanic," "White Hispanic," or some other racial group as well.]
\{Q: RCOMM $\}$
Those are all the questions I have for you. Before I say good-bye, are there any other comments you'd like to make?
[OPEN-END]
\{Q: THANKYOU\}
Thank you very much for participating. We appreciate the time you have taken to complete this interview. The survey's results will be reported to the County Board at a public meeting in early fall.
[READ IF NECESSARY:] If you have any questions on the purpose of this study, you can call the Prince William Office of Executive Management at 792-6720, or you can call my supervisor here at the Center for Survey Research. We're at 1-800-CSR-POLL--just mention the Prince William survey.

Again, thank you and goodbye.

## Appendix B: Survey and Sampling Methodology

## SURVEY AND SAMPLING METHODOLOGY

The 2008 Prince William County Citizen Satisfaction Survey was conducted by the Center for Survey Research (CSR) using a Computer-Assisted Telephone Interviewing (CATI) system, employing an innovative triple-frame telephone sampling methodology that included Random Digit Dialing [RDD] of landline telephones, a random sample of directory-listed telephone numbers, and RDD sampling of cellphone exchanges. A discussion of the general methodology appears in Section I of this report. This appendix provides additional details on how the questionnaire was developed, how the sample was selected, how the survey was administered, statistical weighting and how statistical testing was used to evaluate the results.

## Sample

In previous years, CSR employed list-assisted random-digit dialing (RDD) to reach a random sample of the households in Prince William County. RDD produces a more representative sample of the population than do most other sampling methods because households are selected for contact at random and all households with a working landline telephone can be reached. Listed and unlisted residential telephones have equal probability of being included in an RDD study. However, because of the increase in the use of cell phones by respondents, the rise in cellphone-only adults, and the decreasing efficiency in RDD, leading survey organizations have begun to field telephone surveys that include cellphone samples. Cell phone samples are less efficient to call than landlines (fewer completions per hour) but reach populations that are less well represented in landline samples. CSR is the first academic survey organization in Virginia to use this developing methodology.
A pilot study of cellphones, funded jointly by CSR and by Prince William County, was fielded by CSR in January-February 2008. ${ }^{1}$ This pilot study used the interview script from the 2007 survey (which was conducted using landline samples in summer of 2007) to complete interviews with 134 adult cellphone users residing in the County, including 45 cellphone-only adults. The pilot provided CSR with an opportunity to develop appropriate procedures, disposition codes, survey questions, and training materials for surveying cellphones. The pilot demonstrated the feasibility of cellphone surveying and allowed assessment of the costs, which are two to three times higher (per interview) than ordinary RDD interviewing. Respondents in the cellphone pilot were offered a cash incentive to complete the interview, in recognition of the fact that some cellphone users incur usage fees if they stay on the phone to complete the interview. A small experiment was built into the cellphone pilot, testing the use of $\$ 5.00$ and $\$ 10.00$ incentives to encourage response.
The 2007 cellphone pilot not only showed the feasibility of cellphone calling, but demonstrated that the demographics of those reached via cellphone are quite different from those currently reachable via landline phone. Cellphone respondents are markedly younger, more likely to be single and nevermarried, more likely to be renters, newcomers to the County, low-income, and members of minority groups (African-American or Hispanic). The pilot also tested the extent to which these respondents differed from those in the main survey in their level of satisfaction with County services. For most items, there was little difference in satisfaction, but for some items differences were large enough to be substantively significant.

In light of these results, County staff agreed that the 2008 Citizen Survey should include a cellphone sample, and the study was budgeted and planned accordingly. To partially offset the additional cost of including cellphones, the sample design included a substantial number of cases to be completed from a random sample of directory-listed numbers, referred to below as "listed sample." (listed sample is sometimes referred to as EWP sample in the literature, because it is derived from the "electronic white

[^14]pages.") In a recent conference presentation, CSR researchers have argued that the cost of pursuing an RDD sample may not be worthwhile if cellphone numbers are sampled as well, arguing that listed sample combined with cellphone sample might offer a closely comparable degree of representativeness. ${ }^{2}$ Rather than discard the RDD approach entirely, the 2008 design split the landline portion of the sample into an RDD portion (the method used in prior years of the survey) and a listed-sample portion drawing on a random selection of directory-listed telephone numbers from any area of Prince William County. This choice was made to preserve comparability with prior years of the survey, and to allow further exploration of whether RDD produces different results. In addition, for the sixth year the survey included geographic over-sampling (based on listed sample for specific areas) to include a larger number of respondents in smaller study areas. The larger sample size allows for a more detailed examination of the responses from the less populated areas in the county. This targeted directory-listed supplement included the Forest Park (22025, 22026 and 22172), Potomac (22191), and Hoadly (20112) areas. Geographic weighting was used to generalize results to the entire county without over-representing any particular district.

In summary, an RDD sample of 7525 telephone numbers ( $45 \%$ of the total) randomly generated from five-digit call groups known to be in operation in Prince William County, and a second, general directorylisted sample from electronic white pages of 3521 telephone numbers ( $21 \%$ of the total) supplemented by a targeted-geography listed sample of 1162 telephone numbers ( $7 \%$ ) were combined with a cell phone sample of 4687 numbers in an effort to ensure greater targeting of harder to reach populations and geographies.

For the 2008 survey, the incentive experiment used in the pilot study was continued, with the same $\$ 5 / \$ 10$ random split used for cellular telephones. The Cell phone samples were randomly divided into two groups, half of which were offered a $\$ 5$ incentive and the other half $\$ 10$. All samples were purchased from Survey Sampling, Inc. of Fairfield, CT, a commercial sampling company that uses state-of-the-art methodologies. Table B-1 summarizes the sample purchased and completions for the different sample types.
Table B-1: Summary of Survey Sample Types Used, 2008

| Phone Type | Sample | (\%) | Completed | (\%) | Ratio <br> (sample:completes) |
| :---: | ---: | :--- | ---: | :--- | :---: |
| RDD | 7525 | $(45 \%)$ | 623 | $(37 \%)$ | $12: 1$ |

Telephone surveys risk biases owing to variation among members of a household in the likelihood of answering the telephone. For example, persons who do not work may be more likely to be available to answer the phone than are those who are employed. Various methods have been developed to randomize respondents within households in order to reduce these biases. For the third year, CSR used a "minimally intrusive method" which combines random selection (between two adults) by computer with the "lastbirthday" method (if household has three or more adults), in which we ask to speak to the adult in the household who had the most recent birthday or, if last birthday is unknown, with the Kish selection process of enumerating first names of eligible household members for random selection by the computer. ${ }^{3}$ This protocol was applied to all households reached via the RDD or listed samples. Cellphone adults, however, were considered to be sampled as individuals. Prior research by others has shown that the percentage of cellphones actively shared by more than one adult is low and that it is very difficult in practice to accomplish a 'hand-off' of the cellphone from one adult to another randomly selected user of the phone. ${ }^{4}$ Therefore, no within-household selection was attempted in the cellphone interviews for this study.

## Questionnaire

This is the eighth Prince William County survey to use the alternating-questions survey format. In an effort to reduce the overall number of questions asked in every year while retaining the ability to make comparisons over multiple years, beginning in 2001 questions were divided into three categories: those that are to be asked every year, those to be asked in only even years, and those to be asked in only odd years. This format, implemented January 2001 by the County government and CSR staff to control

[^16]survey length, contains core questions to be asked each year and two sets of questions included in the survey in alternate years. The form is: Core plus group A in odd-numbered years, followed by Core plus group B in the even years. The 2008 survey includes the core questions, plus many of the questions designated group B. To allow reliable comparisons among the results of the sixteen surveys, the wording of most of the questions was left identical to that used in the previous fourteen surveys.
The 2008 survey continued the practice of "question rationing" begun in 1995. This is a system for asking certain questions of fewer than all respondents, in order to ask a larger number of questions and obtain a sufficiently large sample of responses to each question without making the survey substantially longer for any individual respondent.
In early 2008, the Prince William County Police Department contracted with the Center for Survey Research for an inter-disciplinary, two-year evaluation of the Department's execution of the illegal immigration enforcement policy enacted by the County Board in 2007 and put into effect in March 2008. As part of this evaluation process, the department requested that additional questions be placed on the annual citizen survey to measure public perceptions of the police performance in this controversial arena of activity. It is expected that the questions added this year about the police execution of the policy (PPOLICY), fairness of the police (POLFAIR), and about crime victimization and reporting will be retained in the survey in 2009 and 2010 as part of this continued evaluation process. (Part of the cost of these additional questions is offset by funding from the police department through the separate evaluation contract with U.Va.)

The questionnaire was pre-tested March 28 through March 31, 2008. The pre-test resulted in 35 completed interviews with households in Prince William County. Based on the pre-test, we refined our training procedures, evaluated the average interview length, adjusted the question-rationing percentages downward to bring the mean survey length below 19 minutes, and corrected minor errors in the CATI program for production interviews. An additional change in the questionnaire was necessitated as the survey went into its production calling phase at the end of April, because the Board of County Supervisors voted on April $29^{\text {th }}$ to change the illegal immigration policy. The PPOLICY question was changed at that time to use a more general wording to describe the policy, and an on-screen explanation was provided, to be used only as needed, to explain the change to those who had heard about the Board's action.

This year for the third time, CSR translated the survey into Spanish and used Spanish-English bilingual interviewers so that the survey could be conducted as easily in Spanish as in English. To enable a proper translation that would achieve comparable results in the Spanish language version of the survey, the English language instrument was sent out to Research Support Services (RSS), a firm that specializes in language translation of survey instruments. They used a Modified Committee Approach carried out by a team of three experienced survey translators and a committee referee. The translators and referee were all native speakers of Spanish (from Mexico, Puerto Rico, Peru and Argentina). In the committee meeting they discussed item by item to determine which word choices would convey the closest meaning to the widest spectrum of Spanish speakers. In addition, decisions on word choice were also affected by the firm's assessment of the demographic characteristics of Spanish speakers in the Virginia area. CSR's lead Spanish interviewer discussed translation decisions with the referee of the RSS team to ensure that the on-site interviewers understood why word choices were made.

The Sawtooth WinCATI software enables switching out English and Spanish surveys without interruption as long as the interviewer is bilingual. Otherwise, English speaking interviewers coded a household as likely Spanish-speaking and then a bilingual interviewer received that number in their calling queue. The lead bilingual interviewer monitored the other Spanish language interviewers to ensure quality and adherence to the Spanish language text. Open-end comments were recorded verbatim in Spanish and then translated by the lead bilingual interviewer.

## Interviewing Procedures

CSR conducted the telephone interviews from its Computer-Assisted Telephone Interviewing (CATI) Laboratory at the University of Virginia. CATI is a system in which computers are employed to increase the efficiency, accuracy, and flexibility of telephone surveys conducted by trained interviewers. Questions appear on the computer screen in programmed sequence as the interviewer presses the keys on the keyboard to record the respondent's answers. Accurate, instantaneous data entry is assured by the system. The computer system stores the database of telephone numbers and is used to control the sampling process, dial each sampled number, schedule callbacks, and record the disposition of each attempted call.
Production calling for the survey was carried out from April 29 through July 25, 2008. All telephone calls for the study were made from the CATI laboratory under the direct supervision of CSR staff. Numbers were dialed automatically by the WinCATI computer system. Calling was done on Sunday through Friday evenings and on Sunday afternoons. The interviewers received at least six hours of training prior to production interviewing. Many had prior interviewing experience on similar studies, some had prior experience with the Prince William County studies specifically, and several were veterans of the cellphone pilot study. Each phone number was given from 8 to 12 call attempts before it was treated as a "no answer" or "busy" number. Landline phones answered by automatic answering machines were treated the same as "no answer" calls (although counted separately); CSR interviewers did not leave messages on the answering machines of potential landline respondents but simply returned the phone number to the sample pool for another calling attempt at a later time. However, answering machine announcements that identified the phone number as a place of business were recorded as such and not re-attempted.
For cellphones, which are often answered by voicemail systems, interviewers left an appropriate message on the first calling attempt only. The message included an invitation to call back at a toll-free number, but very few callbacks were received. Nevertheless, the messages probably served to increase future receptivity to calls from CSR. On cell phones that identified themselves as businesses, the number was not removed until the cell phone owner confirmed that it was a business only or three attempts were made. This is because many small business owners use their cell phone for business and personal affairs but leave only a business message on their voice mail.

During the 1996 survey we began the practice known as "conversion calling," which was used again this year, in order to reduce "non-response bias." Non-response bias in surveys results when qualified respondents do not complete a survey, usually because they refuse to cooperate. In conversion calling, our most highly trained interviewers call back households in which we previously had someone refuse to take the survey. First, we kept track of the "tone" of initial refusals. "Hard" refusals, those in which people explicitly asked not to be called again, or were noticeably agitated or upset about our phone call, were not called back at all. "Soft" refusals, those for which it seemed that we only caught someone at a bad time, were called back once more after an interval of at least three days. In addition, "hard" refusal respondents who additionally request to be put on CSR's do not call list are removed from calling for three years. This is in keeping with best practices recommendations in the survey industry.

## Productivity and Response Rates

A total of 16,895 phone numbers were attempted in the course of the survey resulting in 1666 complete or nearly complete cases used for analysis. The interviews took an average of 19.44 minutes to complete once a qualified respondent was identified, with a median time of 18.78 minutes. ${ }^{5}$ Spanish language surveys in the past as well as in 2008 have run longer than the English language version. The length disparity is even greater this year primarily due to a higher proportion of Spanish language surveys being
${ }^{5}$ These times indicate the "completion time"-the time that it took the interviewer to complete the interview from within-household selection of a qualified respondent to goodbye. For this year, the amount of time that the respondent household was actually on the phone, e.g. from greeting to goodbye, comprised an average of 21.54 minutes, with a median of 20.53 minutes.
conducted by cell phone (36\%) than was the case in English (10.1\%). Cell phone surveys tend to be shorter at the beginning because of the simpler selection process but longer at the end because of the need to obtain information for providing the incentive. For production interviewing the time on the phone from greeting to goodbye was 20.9 minutes in English and 26.1 minutes in Spanish.
Landline surveys have more complex selection process (discussed above) than the cellular phone. For the cell phone it was assumed that the person answering the phone was the primary user unless stated otherwise by the respondent. This contributed to cell phone surveys being shorter at the respondent selection portion on average than landline. However, overall, cell phone interviews tend to be longer: the average length from greeting to goodbye on a landline interview was 21.4 minutes whereas for the cell phone it was 22.6 minutes. If we look at the point at which a qualified respondent was selected, the landline was 17.3 minutes on average and the cellular was 18.1 minutes.
The final disposition of each of the attempted phone numbers is shown in three tables at the end of this Appendix. This year's disposition report, like those reported since 1998, is presented in a format that has been recommended as an industry standard by the American Association for Public Opinion Research. ${ }^{6}$ However, because of the addition of cellular phones this year we have also reported the final dispositions with landline and cellular broken out into their own tables. The AAPOR rate was calculated by a custom analysis of the complete call history of each attempted number, using a program written in SPSS by CSR technical staff. CSR completed a total of 1663 interviews (including those completed in the conversion phase of calling), for an overall response rate of $17.5 \%^{7}$. There were also 161 partial interviews of which 3 were sufficiently complete for inclusion in the study. Of these interviews, 75 interviews were conducted in Spanish.
The true response rate depends on how one estimates the percentage of working residential phones that exist among the many numbers that never answered our many call attempts. An estimate of $19.4 \%$ for the landline only RR3 (not shown in the table) is based on the most conservative assumption (equivalent to the CASRO rate) that the percentage of residential households among unreachable numbers is the same as the percentage among those we reached, i.e., $60.8 \%$. However, because CSR completed multiple attempts to nearly all of the no-answer numbers and based upon prior experimentation with listed and RDD samples in Virginia, we estimate that the residency rate is around 20\% of no-answer numbers and that our true response rate (adjusted RR3) for landlines is closer to $20.2 \%$. Within the landline sample the adjusted RR3 for RDD production was $17.7 \%$ and the unadjusted RR3 for listed production was $22.1 \%$. For the Cell phone portion of the sample, the estimated response rate is $8.31 \%$ and as with directory-listed sample the adjustment is not used. ${ }^{8}$
Finally, the efficiency of the calling can be expressed in terms of number of completions per hour of calling (CPH). The overall interview production rate ( 0.84 interviews per hour) is less than prior surveys, mostly due to the addition of cell phones as well as declining rates of RDD productivity nationwide. For the 1479 landline cases the production rate was .92 , whereas for the 187 cellular respondents production was .50. Table B-3 breaks out the production rates for each sample component.

[^17]Table B-3: Respondents by Sample Type and Area, 2008

| PWC Citizen Satisfaction Survey 2008 Productivity |  |  |
| :---: | :---: | :---: |
|  | Completes | Rate/hr |
| PR1: RDD | 623 | 0.76 |
| PR2: List-Targeted geography | 163 | 1.11 |
| PR3: Cell+\$10 | 92 | 0.56 |
| PR4 List-General Area | 693 | 1.09 |
| PR5: Cell+\$5 | 95 | 0.46 |
| Cell only | 187 | 0.50 |
| Landline only | 1479 | 0.92 |
| TOTAL | $\mathbf{1 6 6 6}$ | $\mathbf{0 . 8 4}$ |

In terms of cost, using a $\$ 10.00$ incentive instead of $\$ 5.00$ can lead to a net cost savings. Given a standard cost estimate of $\$ 32$ per interviewing hour for telephone production, the increase in the rate of completions per hour can actually save more than the cost of an extra $\$ 5.00$ in incentive payment. This estimate does not include processing fees and other administrative costs. Table B-4 illustrates this result.

Table B-4: Cell phone $\$ 5.00$ v. $\$ 10.00$ incentive cost calculations

| PWC Incentive Productivity 2008 |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Geography

In order to perform a geographic analysis of survey responses, CSR has grouped respondents into areas according to the Zone Improvement Plan (ZIP) code area in which they live. The Zip code is preferable to other methods because most respondents are willing and able to specify their Zip code. Obtaining Zip codes in each annual survey facilitates comparisons over time.

The regions of Prince William County used in the present analysis are defined by Zip code groupings, which were developed in consultation with the study sponsors. They were originally selected to represent distinct and meaningful groupings of the population, while collecting a sufficient number of respondents from each region to allow fruitful statistical analysis.
From the survey's inception in 1993 through 2001, the County was divided into five geographic areas. Several Zip code numbers in the County changed effective 1 July 1996; however, except for the splitting of two previous Manassas-area Zip code areas, this involved no changes in Zip code boundaries, and the boundaries of the five geographic regions used in our 1997-2001 analysis are identical to those used in 1994, 1995 and 1996, before the number changes took effect.
In 2002, because of growth in the County, the regional groupings were further refined. The "RuralResidential Crescent" was divided into four areas - North County, Gainesville/Linton Hall, Brentsville and Mid County - creating a total of eight geographic areas. The 2002 regions are defined by Zip code in the table below.
For the 2006 survey a few changes in population distribution were significant. A portion of the areas designated with the 22193 Zip code in prior surveys were moved to 22192 because these areas, formerly part of the Dale City survey area, are now part of the Lake Ridge-Westridge-Occoquan survey area. It is likely that survey respondents living in this area reported their Zip code differently that year but this change did not affect the definition of the distribution areas for Prince William County. One change that did slightly modify the distribution areas from the 2005 Survey was the addition of Zip code 22025 to the Woodbridge-Dumfries survey area. Table B-5 shows the relationship between the Zip codes and the geographic areas through 2006.

Table B-5: Zip Code by Area Distribution, 1993-2006

| AREA | 2006 Zip Codes | $\begin{gathered} \text { 2002-2005 Zip } \\ \text { Codes } \end{gathered}$ | $\begin{aligned} & \text { 1997-2001 Zip } \\ & \text { Codes } \end{aligned}$ | $\begin{aligned} & \text { 1993-1996 Zip } \\ & \text { Codes } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: |
| Woodbridge-Dumfries | $\begin{aligned} & \hline \hline 22025,22026, \\ & 22172,22191 \end{aligned}$ | $\begin{gathered} \hline \hline 22026,22172, \\ 22191 \end{gathered}$ | Same | Same |
| Dale City | 22193 | Same | Same | Same |
| Lake Ridge- <br> Westridge- Occoquan | 22125, 22192 | Same | Same | Same |
| Sudley-Yorkshire | 20109, 20110 | Same | Same | Same |
| Rural-Residential Crescent: |  | Divided into four additional areas | 20111, 20112, 20119, 20136, 20137, 20143, 20155,20169, 20181 | Same |
| North County | $\begin{gathered} \hline \text { 20137, 20169, } \\ 20143 \end{gathered}$ | Same |  |  |
| GainesvilleLinton Hall | 20136, 20155 |  |  |  |
| Brentsville | 20181 | 20119, 20181 |  |  |
| Mid County | 20111, 20112 | Same |  |  |

The County determined that for the 2007 survey an entirely new distribution of the areas would be implemented to better approximate all magisterial districts using the Zip codes. This new grouping of seven areas permitted statistically significant comparisons between the sub-regions using a lower overall sample size than in previous years. Table B-6 shows the relationship between these new areas and the Zip codes.

Table B-6: Zip Code by Area Distribution, 2007-8

| 2007-8 AREA | 2007-8 Zip Codes |
| :--- | :---: |
| Battlefield | 20109, 20137, 20143, 20155, 20169 |
| Broad Run | $20110,20111,20136,20181$ |
| Hoadly | 20112 |
| Old Bridge | 22125,22192 |
| Dale | 22193 |
| Potomac | 22191 |
| Forest Park | $22025,22026,22172$ |

Table B-7 provides the sample distribution of the new 2007-8 seven area grouping indicating how the Zip code distribution for the current 2008 sample responses falls into each.

## Table B-7: Distribution of Current Responses into New Regional Breakdown, and Weight Values

| 2007-8 Areas (7) | Population of Households, |  | 2008 Sample | Weight |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | (count) | (\%) |  |  |  |
| Battlefield | 30,156 | $23.48 \%$ | 268 | $16.28 \%$ | 1.438 |
| Broad Run | 16,635 | $12.95 \%$ | 228 | $13.85 \%$ | 0.932 |
| Hoadly | 7,745 | $6.03 \%$ | 224 | $13.61 \%$ | 0.442 |

| Total | 128,429 | $100.00 \%$ | 1,646 | $100.00 \%$ |  |

## Weighting

Statistical weighting of the survey results was designed this year to accomplish two objectives: (1) to correctly represent the seven geographic areas, and (2) to properly represent different types of phone service in the County's population (cellphone-only cases, landline-only cases, and those with both kinds of telephone service).

Geographic weighting. This year continues the practice begun four years ago of using statistical weighting to correct within-county geographic representation. This procedure was necessary for countywide generalizations because of the over-sample designed to offer a more detailed examination of the responses from the three less populated areas in the county. The data are weighted to properly reflect the proportion of households in each of the County's districts as demonstrated in Table B-7 above. ${ }^{9}$

[^18]Cellphone weighting. Current research on cellphone interviewing is still in its infancy, and there are no standard, accepted methods for weighting the results of a 'dual frame' sample that combines completed interviews from landline samples with completed interviews from cellphone samples. Prof. Guterbock has been working on the development of appropriate methods, and our approach to the current study applies his latest research to the available local data. Here we treat RDD and listed samples as one "landline" sample, thus treating our triple-frame design as a dual-frame sample (cellphone and landline sampling frames).
The heart of the weighting problem is simple: there is no available external source that will tell us the percentage of the County population that has cellphone-only service, landline only, or both. Authoritative data are collected at the national level by the Centers for Disease Control in the National Health Interview Survey, a very large, continuous, in-person data collection focused on health issues. ${ }^{10}$ That survey determines the phone-service status of each household in a representative national sample, and results from as recently as the second half of 2007 are currently available. However, these data are available only at the national or broad regional level. It is doubtful that these broad averages across regions are directly applicable to Prince William County.

The estimation problem is made somewhat more difficult by the fact that rates of survey response are not even across different phone-use segments. That is, cellphone-only adults are much more likely to answer their cellphones than are those who have both kinds of phones. This is understood to reflect differences in telephone behavior between cellphone-onlies and dual-phone users. Cellphone-onlies are presumably more likely to have their phones with them, to have their phones turned on, and to accept calls from unknown numbers than are those who continue to rely on landline phones. For these reasons, the percentage of cellphone-only cases encountered in actual cellphone surveys is much higher than their actual share among all cellphone users. It is probably also the case that landline-only households are somewhat overrepresented within landline samples, as compared to those who have both kinds of phone. The latter group is referred to below as the overlap sample, because the households having both landline and cellphones lie at the intersection of the cellphone frame and the landline frame.

In order to estimate the degree of under-representation of the overlap sample segment in the cellphone sample and in the landline sample, we compared recent results from the 2007 California Health Interview Survey (a telephone survey combining RDD sample with cellphone-only households) with the results from NHIS for the Western Region of the United States (second-half 2007 results). ${ }^{11}$ Using algebraic formulas developed by Prof. Guterbock, we were able to determine the values for two response rate ratios: r1, the ratio of the response rate to cellphone calling in the overlap sample compared to the response rate of cellphone-onlies, and r2, the ratio of the response rate to landline calling in the overlap sample to the response rate of landline-onlies. The NHIS for the Western region reports that the phoneservice proportions in the Western region were: $13.2 \%$ cellphone-only, $67.9 \%$ dual-phone (overlap), and $18.9 \%$ landline only. If response rates were equal ( $\mathrm{r} 1=\mathrm{r} 2=1.0$ ), and if California's phone usage is the same as that of the Western region, then the CHIS 2007 would have found $16.3 \%$ of the cellphone completions to be cellphone-onlies. Instead, CHIS 2007 reports $34.6 \%$ percent cellphone-onlies. CHIS should have found $21.7 \%$ landline-onlies in the landline sample, but actually had $32.7 \%$ landline-onlies in its landline RDD sample. Applying Guterbock's formulas to these data results in an estimate of r1 = . 368 and $\mathrm{r} 2=.598$.

A further refinement in the estimation of the response rate ratios is attainable by examining the results of a question in the NHIS and in CHIS that asked those in the overlap sample where they get most of their calls: on the cellphone, on the landline, or from both about equally. As might be expected, those reached through the cellphone sample are more likely to say they get most of their calls by cellphone, and vice

[^19]versa for the landline sample. Comparison of these contrasting percentage distributions on phone usage can contribute information that allows for a more refined estimate of r 1 and r 1 . When specific phoneusage response rate ratios (calculated from comparing CHIS 2007 to NHIS 2007) are applied to the data on phone usage collected in the current study (see question CELLCOMP), we arrive at PWC-specific values for the response rate ratios: r 1 is estimated to be .373 and r 2 is estimated to be .612 .

Because final results of the survey were not available at the time when decisions had to be made about the sample weights, the basic weights were determined using near-final survey data as shown in Table B-8. The "estimated true" values are derived by application of the PWC-specific estimated values for r1 and r2.

Table B-8: Initial estimates of the phone-service segments in Prince William County

|  | Cell Phone sample |  | Landline sample |  | Combined samples |  | Est. true | Weight | Weighted N |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Cell Only | 57 | $35.20 \%$ | 12 | 0.90\% | 69 | 4.70\% | 16.00\% |  | 236 | 16.00\% |
| Overlap (Both) | 105 | 64.80\% | 1186 | 90.30\% | 1291 | 87.50\% | 78.80\% | 0.901 | 1163 | 78.80\% |
| LL Only | -- | -- | 116 | 8.80\% | 116 | 7.90\% | 5.20\% | 0.663 | 77 | 5.20\% |
|  | 162 |  | 1314 |  | 1476 |  | 100\% |  | 1476 |  |

Once the final results were available, a further decision needed to be made about weighting the overlap sample. By design, we did not complete a very large number of cellphone cases because of their greater expense. In theory, if all phones in the County had been called with equal likelihood, we would have reached one half of the overlap sample through their cellphone and one half through their landline. This would call for weighting the portion of the overlap sample reached through cellphone up by very large weight to bring their share of the overlap to $50 \%$, which could potentially have distorted the results and also increased the 'design effect' in the study, reducing the precision of the estimates. We decided to apply a weight of 2.0 to the cellphone cases in our overlap sample, allowing the weight on the landline cases in the overlap sample to take a value that would result in an overall overlap percentage in the weighted sample of $78.8 \%$. Table B-9 shows these weights as applied to the completions in the near-final sample. When data were subjected to final cleaning and the last few interviews were completed, the final number of usable cases increased slightly, but the weights shown below were applied to all cases in each phone-usage segment.

Table B-9: Final estimates of the phone-service segments in Prince William County

|  | Cell phonesample |  | Landline sample |  | Combined samples |  | $\begin{aligned} & \text { Est. } \\ & \text { true } \end{aligned}$ | Weight | Weighted N |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Cell only | 76 | 40.60\% | 11 | 0.70\% | 87 | 5.30\% | 0.1596 | 3.0365 | 264 | 16.00\% |
| Overlap: Cell | 111 | 59.40\% |  |  | 111 | 6.70\% | 0.1341 | 2.0000 | 222 | 13.40\% |
| Overlap : LL | -- |  | 1303 | 88.80\% | 1303 | 78.70\% | 0.6541 | 0.8309 | 1083 | 65.40\% |
| LL only | -- | -- | 154 | 10.50\% | 154 | 9.30\% | 0.0521 | 0.5599 | 86 | 5.20\% |
|  | 187 |  | 1468 |  | 1655 | 100\% | 1 |  | 1655 | 100\% |

The final step in the weighting process was "raking," a statistical procedure used to produce combined weights for two weighting factors. The percentages for geographical areas in Table B-7 were used along with the weights for phone usage from Table B-9 in an iterative process that produced a final weight for each of the 28 design cells (4 phone-usage segments $\times 7$ areas) that would best fit with the given marginal
population distribution for each weighting factor. This procedure necessarily treats the distribution of phone-usage segments as being equal across the geographic areas.

The weights so derived were introduced into the Complex Sampling module of SPSS statistical software. This tool allows calculation of a "design effect" for each question in the survey. The design effect shows how the variance of sample estimates is increased by the effect of post-stratification weighting. We base our estimate of the overall margin of error on a key survey question, the satisfaction with overall services in the County (CTYSAT). For that question, the design effect is 1.37 , meaning that the margin of error in our sample of 1,666 cases is equivalent (because of the weighting) to the margin of error we would have obtained from a simple random sample of $1,216(1,666 / 1.37)$. The margin of error is increased by the square root of the design effect, a factor in this case of 1.17.

A more complete description of the cell phone estimation procedures used here, along with algebraic formulas needed to calculate and apply the response rate ratios, is currently in preparation by Prof. Guterbock and his colleagues.

## Sampling Error and Statistical Testing

Based on our final sample of 1,666 respondents, the survey has a sampling error of plus or minus 2.87 percent. ${ }^{12}$ This means that in 95 out of 100 samples of this size drawn from Prince William County, the results obtained in the sample would fall in a range of $\pm 2.9$ percentage points of what would have been obtained had every household in the County with a working landline or cellular telephone been interviewed. Larger sampling errors are present when analyzing subgroups of the sample or questions that were not asked of all respondents; smaller sampling errors are present when a lopsided majority gives the same answer (e.g., 80 percent of the sample are satisfied with a given service).

Statistical significance tests were used for two principal purposes. One was to compare the results of the 2008 survey with those obtained in previous years. The other was to verify the existence of satisfaction differences among various subgroups. For both of these purposes, we used the Pearson Chi-Square test of independence. We report in these pages differences that yield a "p-value" of .05 or less. A level of .05 indicates that there is only a 5 percent chance that the difference we find is due to sampling error, rather than reflecting a real relationship within the study population. In comparisons of satisfaction items, the four response categories were collapsed into two, "satisfied" and "dissatisfied." The statistics for evaluating statistical significance were calculated using the SPSS Complex Sampling module and hence take into account the "design effect." ${ }^{13}$ However, they do not measure sources of error, which can occur in any poll or survey, that are not related to sampling or weighting.

## Question

How satisfied are you with the level of security in the courthouse?
Satisfaction Sheriff's Office attitudes and behaviors toward citizens
Satisfaction with the overall performance of the Sheriff's Office

Have you dialed 911 over the past 12 months?
When you dialed 911 which services did you call for?
Was your call because of an emergency?
How satisfied were you with:
The assistance you received from the person who took your 911 call?
The time it took for help to arrive on scene?
The assistance provided on the scene?
How many people in your household have been trained in CPR?
Why dissatisfied with the assistance received from person taking 911 call?
How much time did it take for help to arrive on the scene?
What is a reasonable amount of time to receive help?
Why dissatisfied with the assistance provided on the scene? In the event of an emergency, how long could you shelter in your home with electricity?
In the event of an emergency, how long could you shelter in your home without electricity?
Providing library services?
Providing park and recreation facilities and programs?
Providing programs to help the County's elderly population?
Providing help to people in financial need?
Providing help to people with emotional, mental, or alcohol and drug problems?
Have you used the county libraries in the past 12 months?
If so, how satisfied were you with service from library staff?
Are you familiar enough to rate the Department of Social Services?
If so, how satisfied are you with DSS services?
Are you familiar enough with Health Department to rate their services?
If so, how satisfied are you with Health Department services?
Are you familiar with the services of the Community Service Board?
How satisfied are you with their:
Services to people with mental retardation?
Early Intervention Services?
Services to people with substance abuse problems?
Services overall?
Services to people with mental health problems

* This question was omitted in the 2007 survey

Over the past 12 months have you contacted anybody in the County government about anything?
If so, how satisfied were you with the helpfulness of employees?
Have you contacted the County about your taxes over last 12 months?
What was the specific reason you contacted the County?
How did you contact the county (telephone, walk in, etc).
How satisfied were you with the helpfulness of employees?
How satisfied were you with time it took for your request to be answered?

## Question

Have you ever used the PWC government website?
If so, how satisfied were you with the site?

How satisfied are you with the job the County is doing planning how land will be used and developed?
Are you familiar enough with County's effort to attract new jobs and business to rate those efforts?
How satisfied are you with the job the County is doing trying to attract new jobs and businesses?
What caused you to be dissatisfied with the job the County is doing to attract new jobs and businesses?
Deleted What types of jobs do you think the county should be trying to attract? What are some reasons you are very satisfied with the job the County is doing to attract new jobs and businesses?

How satisfied are you with:
The job the County is doing in preventing neighborhoods from deteriorating and making sure the community is well kept up?

The recycling services in the County?
Have you used the County landfill in the last 12 months?
If so, how satisfied were you with landfill services?
In the past twelve months, have a member of your family used the Balls Ford Road Compost

How satisfied were you with the Balls Ford Road compost facility
How satisfied are you with:
The ease of travel or getting around within PWC?
The ease of getting around Northern VA outside of PWC?
*Client asked that OUTSIDEC be moved to the core questions.
REVISED Public transportation provided to PWC residents for destinations within PWC?
What would make you more satisfied with public transportation?
What aspects of PWC's public transportation contribute to your satisfaction?
REVISED How satisfied are you with public transportation provided to PWC residents for destinations elsewhere in NOVA and DC?

How satisfied are you with:
The rate of growth in the County?
The coordination of development with transportation and road systems?
The County's efforts to protect the environment?
The County's efforts to preserve open space?
The County's efforts in historic preservation?
Opportunities for citizen input on the planning process?
The visual appearance of new development in the County?
NEW Satisfaction: safety of buildings, residential and non-residential constructed in the County in the two years?
Familiarity with the County's effort to preserve and improve the water quality of the streams?
Satisfaction with the County's effort to preserve and improve the water quality of the streams

## Question

How satisfied are you with the visual appearance of the County in regards to:
The amount of trash / debris, litter along roadways and in neighborhoods?
The number of illegal signs along major roads?
Deteriorated buildings and other structures?
The number of junk cars along roadways and in neighborhoods?

Should services and taxes increase, decrease, or stay the same?
How satisfied are you with the County in giving you value for your tax dollar?
How satisfied are you that the County provides efficient and effective service?
How much of the time can you trust the County government to do right?

How many persons under 18 live in your household?
Are any of those children less than 5 ?
Are any of those children ages 5 to 12 ?
Are any of those children ages 13 to 17 ?
Do you currently have any children attending PWC Schools?
How satisfied are you:
That the school system provides efficient/effective service?
Deleted With adult learning opportunities in the County?
Deleted With life-long learning opportunities in the County?
Have you used park and recreation facilities in the past 12 months?
Are you familiar enough with Park Authority services to rate?
How satisfied are you that the Park Authority provides efficient/effective service?
Are you familiar enough with Service Authority to rate?
How satisfied are you that Service Authority provides efficient/effective service?

How many persons in your household are 18 or older?
NEW Do any of these adults share this cell phone?
NEW Distribution of calls made and received (cell/landline)
NEW Of the other adults in the household, how many have their own cell phone?
NEW Is the number I dialed listed in the current telephone book?
In what year were you born?
Are you working full time, part time, looking for work?
Do you have any specialized work related license?
What kind of work do you do at your job?
What is the main business or industry of your organization?
So you are employed in?
What is the place where you work primarily concerned with?
In what county or city is your job located?
And where in Fairfax is your job located
Are you living today in the same house as you were a year ago?
Are you commuting to the same workplace as you were a year ago?
How long on average does it take you to get to work?
During the past year has your commuting time gotten longer/shorter/same?
Do you telecommute or telework?
In past 12 months, how often have you telecommuted or teleworked?

[^0]:    ${ }^{1}$ Throughout this report, only those differences that reached statistical significance to the degree of $\mathrm{p}<.05$ (a $95 \%$ level of confidence) will be discussed.

[^1]:    ${ }^{3}$ These percentages total more than 100 percent because respondents were asked to indicate whether or not they were Hispanic in addition to selecting their race.

[^2]:    ${ }^{4}$ Using the wording residents, 79.7 percent expressed satisfaction, a rating that is not significantly different from the 81.1 percent satisfied (with the word citizens).

[^3]:    5 Analysis of these ratings shows no significant differences between the two wordings of the question.

[^4]:    ${ }^{6}$ As explained above, most of the "others" are those who identified their race as Hispanic, which is not considered a racial category in this survey.

[^5]:    ${ }^{7}$ This rating is significantly higher than the 90.6 percent satisfaction reported with the use of the word "citizens".

[^6]:    ${ }^{8}$ These percentages sum to more than 100 percent because some respondents had called 911 for more than one service.

[^7]:    * A similar question was asked prior to 2005, but due to changes in the structure and phrasing of the question, the two are not directly comparable.

[^8]:    ${ }^{9}$ These percentages total to more than 100 percent because some respondents had contacted the government in more than one way.

[^9]:    ${ }^{10}$ These ratings combined the ratings of the land question asked before and after the jobs series (see page A-27of Appendix A)

[^10]:    ${ }^{11}$ In order to provide an unbiased comparison, this percentage only includes the satisfaction ratings of those that were asked the screener question in 2006. Those that were not asked the screener question are not included in this percentage and comparison.

[^11]:    * A similar question was asked prior to 2005, but due to changes in the structure and phrasing of the question, the two are not directly comparable.

[^12]:    1 The survey script is reproduced in abbreviated form. Question wording, instructions, and key definitions are reproduced in full from the actual computer-aided script used in interviewing. The sequence of questions follows the order in which they were presented to the respondent. Only responses in lower case were read by the interviewer, while responses in upper case were not read. Bold text comments are included solely in the Appendix to indicate programming notes.

[^13]:    1 VERY SATISFIED
    2 SOMEWHAT SATISFIED
    3 SOMEWHAT DISSATISFIED
    4 VERY DISSATISFIED
    8 DON'T KNOW/UNABLE TO RATE
    9 REFUSED

[^14]:    ${ }^{1}$ Abdoulaye Diop, Young-Il Kim, John Lee Holmes, and Thomas M. Guterbock. Prince William County Cell Phone Pilot Survey [A Supplement to the 2007 Citizen Satisfaction Survey]: Summary Report of Results. Center for Survey Research, March 2008.

[^15]:    ${ }^{2}$ Thomas M. Guterbock, James Ellis, Abdoulaye Diop, Kien Le, and John Lee Holmes. "Who Needs RDD: Combining Directory Listings with Cell Phone Exchanges for an Alternative Sampling Frame" Paper presented at the Annual Meetings of the American Association for Public Opinion Research, New Orleans, May 2008.

[^16]:    ${ }^{3}$ Programmed by CSR into the CATI system based on the method's description in Louis Rizzo, J. Michael Brick and Inho Park "A Minimally Intrusive Method for Sampling Persons in Random Digit Dial Surveys," Public Opinion Quarterly, Vol. 68, No. 2 (2004), pp. 267-274.
    ${ }^{4}$ J. Michael Brick, W. Sherman Edwards, and Sunghee Lee."Sampling Telephone Numbers and Adults, Interview Length, and Weighting in The California Health Interview Survey Cell Phone Pilot Study." Public Opinion Quarterly ( 2007) 71: 793-813.

[^17]:    ${ }^{6}$ The American Association for Public Opinion Research. 1998. Standard Definitions: Final Dispositions of Case Codes and Outcome Rates for RDD Telephone Surveys and In-Person Household Surveys. Ann Arbor, Michigan: AAPOR. See also the AAPOR website, www.aapor.org.
    ${ }^{7}$ Calculated according to AAPOR suggested formula RR3, with $e 1=.17$ and $e 2=.84$. We estimated the percent of working, residential numbers among those that were found to always be busy or no-answer (the residency rate) to be .20. This estimate is based on the results of prior CSR experiments that compare RDD sample results with directory-listed sample results for Virginia. We estimated $e 2$ by dividing households determined to be eligible by the N of households overall. The estimated $e 2$ was applied to housing units where eligibility could not be determined. We derived $e 1$ by taking the product of $e 2$ and the estimated residency rate. This rate was applied to numbers that were never reached and could not be determined to be residential households. Partial interviews are not counted in the numerator of the RR3 formula but are counted in the RR4. Our RR4 response rate with partial interviews included was $21.4 \%$.
    ${ }^{8}$ The RR4 estimates for RDD and directory-listed samples for 2008 were $20.8 \%$ and $24.3 \%$, respectively.

[^18]:    ${ }^{9}$ This household population information by Zip code was provided by Prince William County and is based on Census 2006 Survey Area Demographics excluding Quantico base.

[^19]:    ${ }^{10}$ Steven J. Blumberg and J.V. Luke. "Wireless Substitution: Early Release of Estimates from the National Health Interview Survey, July-December 2007." National Center for Health Statistics, May 13, 2008. Available at: http://www.cdc.gov/nchs/nhis.htm.
    ${ }^{11}$ Thanks to Michael Brick of Westat for sharing some of the preliminary results from CHIS 2007 for this purpose.

[^20]:    ${ }^{12}$ This estimate takes into account the "design effect" that somewhat increases sampling variance due to the oversampling of smaller districts and the weighting used to correctly represent our estimates of phone-service segments. If we had taken a simple random sample of 1,666 cases, the margin of error would have been $\pm 2.4 \%$.
    ${ }^{13}$ This is the first year in which statistical tests were conducted that take into account the design effect. When the design effect is taken into account, tests of significance become more conservative, requiring a somewhat larger difference between groups (or change between years) to achieve significance at the $95 \%$ confidence level. In the tables that compare satisfaction across years, the tests comparing 2008 to all other years take the design effect into account. Comparisons among earlier years do not, but there was no weighting at all in years prior to 2006, so the design effect was equal to 1.0 (no effect) for those years. For 2006 - 2007, weights used on the data were fairly small, so the design effects are not generally large enough to change the conclusions about statistical significance.

[^21]:    * A mean rating with a superscript indicates that this mean is significantly higher (at the 5\% level) than the mean in the column corresponding to the superscript.
